

Shoreline Master Program

2012

Abstract

This draft represents a comprehensive update to the City of Fife's Shoreline Master Program that was originally adopted in 1973. The comprehensive update is consistent with the Best Available Science recommendations made in the City's *Inventory and Characterization*, as well as other plans and policies including: *Comprehensive Plan*; *Comprehensive Parks, Recreation, and Open Space Plan*; and *Transportation Plan*.

This project was funded in part by the Washington Department of Ecology and completed with assistance from Grette Associates, LLC.

Appendix A: City of Fife: Official Shoreline Maps

Appendix B: Environmental Protection Regulations for Critical Areas within the Shoreline
Jurisdiction

Appendix C: City of Fife: Shoreline Inventory and Characterization

Appendix D: City of Fife: Restoration Plan

1. INTRODUCTION

A. Requirements of the Shoreline Management Act

Washington's Shoreline Management Act (SMA) was passed by the State Legislature in 1971 and adopted by voters in 1972. The overarching goal of the SMA is "*to prevent the inherent harm in an uncoordinated and piecemeal development of the state's shorelines*"

In conjunction with the enacting of the SMA by the State of Washington, the Department of Ecology was tasked with developing regulatory guidelines to assist local governments with the implementation of the SMA. These guidelines, WAC 173-26, provide state standards which local governments must use in drafting shoreline master programs and updates and translate the broad policies of the SMA into standards for regulation of shoreline uses. These guidelines, first drafted in 1972, were updated by Ecology in 2003 after a lengthy public comment process involving input from business, environmental and local government interests as well as private citizens. The guidelines were adopted with the endorsement of the Association of Washington Business, the Washington Aggregates & Concrete Association, the Washington Environmental Council (WEC) and other environmental organizations. The City of Fife is updating its Shoreline Master Program in compliance with these guidelines.

In its broadest terms, Fife's compliance with the SMA requires:

1. Creating an inventory of the natural characteristics and land use patterns along shorelines covered by the SMA.
2. Preparing a "Master Program" to provide for the future of shorelines.
3. Developing a permit system to further the goals of the SMA and the City of Fife's Shoreline Master Program.

B. Shoreline Jurisdiction

This Shoreline Master Program (SMP) applies to all lands and waters in the City of Fife that meet the statutory definitions for "*shorelines*", "*shorelands*", "*shorelines of statewide significance*" and "*shorelines of the state*" as defined within RCW 90.58.030. Specifically, the SMA applies to the following:

- All marine waters;
- Streams with a mean annual flow greater than 20 cubic feet per second;
- Lakes and Reservoirs of the state equal to or greater than 20 acres;
- Associated Wetlands;

- Shorelands or shoreland areas.

Upland areas called “shorelands” or “shoreland areas” means those lands extending landward for 200 feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward 200 feet from such floodways; and all wetlands and river deltas associated with the streams, lakes and tidal water.

The shoreline jurisdiction within the City of Fife is depicted in Appendix A of this document and includes the shorelands associated with the Puyallup River and Hylebos Creek, all associated wetlands including two wetland areas associated with the Puyallup River (the Radiance Oxbow and the Sha Dadx), as well as the 100-year floodplains of the Puyallup River and Hylebos Creek as currently shown on the approved Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMS). Land necessary for buffers for critical areas are not included if they extend beyond the jurisdictional limits described above.

The SMP jurisdictions and designations identified on the Official Shoreline map located in Appendix A of this document, address all areas within the City of Fife’s corporate limits. This map also identifies pre-planned designations for the Fife Urban Growth Areas (UGAS) should they be annexed while this SMP is in effect. Prior to annexation, these areas would be subject to Pierce County Jurisdiction and the Pierce County Shoreline Master Program.

Should new areas, for which pre-designation has not occurred, come under this SMP, the lands shall be automatically designated Conservancy Shoreline consistent with WAC 173-26-211(2)(e) until that time in which the City of Fife can fully evaluate the shorelands and amend its plan. Refer to Section 6.B of this document for additional information.

C. Applicability

Except when specifically exempted by statute, all proposed uses and development occurring within shoreline jurisdiction must conform to RCW 90.58, the Shoreline Management Act of 1971 (SMA), and this Shoreline Master Program.

In addition to the requirements of the SMA, permit review, implementation and enforcement procedures affecting private property must be conducted in a manner consistent with all relevant constitutional and other legal limitations on the regulation of the private property.

D. How the Shoreline Master Program is Used

The City of Fife’s Shoreline Master Program (SMP) includes goals, policies, and regulations for development occurring within shoreline areas of the City. To ensure that shoreline areas within the City are preserved and development is appropriate, all development proposals within the shoreline area are reviewed in accordance with this SMP. As such, the SMP includes general goals and policies,

general regulations for each shoreline designation, use-specific regulations, and administrative procedures for the issuance of shoreline permits.

Through an extensive public process with the Planning Commission and City Council, five shoreline designations were established to respond to the environmental characteristics of the City's shorelines. These shoreline designations are as follows: Conservancy, Shoreline Residential, Urban, Levee, and Aquatic. These designations are further described in Chapter 6.

E. Relationship of this Shoreline Master Program to Other Plans

Protection and restoration of critical areas within shorelines jurisdiction was of primary consideration during the preparation of the Shoreline Master Program as was integrating the plan with the City's existing Comprehensive Plan, Development Regulations, and the plans and policies of the Puyallup Tribe of Indians as well as state and federal agencies.

It was the express intent of the City of Fife to achieve consistency between this Master Program and other City plans, policies, and regulations. If inconsistencies are found between this Master Program and other City plans, policies, and regulations, the regulation that affords greater protection to the City's shorelines shall prevail.

In addition, an applicant applying for a permit with the City is required to be in compliance with all other local, county, state, regional, or federal statutes or regulations, which may also be applicable to such development or use. Project relevant regulations within the City may include but are not limited to: Fife Municipal Code (FMC) Title 15.40 – Flood Damage, FMC Title 19 – Zoning, and FMC Title 21 – Low Impact Development. Critical Areas within the shoreline jurisdiction will be reviewed pursuant to Appendix B of this document.

F. Puyallup Tribe Jurisdiction

The Puyallup Tribe of Indians owns lands that are encompassed within the boundaries of the City of Fife but are regulated by the Puyallup Tribe and are not part of the City of Fife. Within the shoreline Jurisdiction, these lands include the land waterward of the Ordinary High Water Mark on the Puyallup River, the hydrologic connections of both the Oxbow and Sha-Dadx wetlands as well as the entirety of the Sha-Dadx wetland. These lands are identified on the official shoreline map. Development and land use within these areas is regulated by the Puyallup Tribe.

G. Severability

If any provisions of this Master Program, or its application to any person or legal entity or parcel of land or circumstances is held invalid, the remainder of the Master Program, or the application of the provisions to other persons or legal

entities or parcels of land or circumstances, shall not be affected (see Administrative Procedures – Section 10).

H. Liberal Construction

Pursuant to RCW 90.58.900, the Shoreline Management Act is exempted from the rule of strict construction. Therefore, the Act and this Shoreline Master Program shall be liberally construed to give full effect to the purposes, goals, objectives, and polices for which the Act and this Program have been enacted and adopted.

2. SUMMARY OF EXISTING ENVIRONMENTAL CONDITIONS

An Inventory and Characterization of existing environmental conditions within the City of Fife was conducted in 2010 (Grette Associates 2010). This Chapter provides a very brief summary of the Inventory and Characterization document which is included as Appendix C.

The City of Fife, which incorporated in 1957, is located north of the Puyallup River, near the head of Commencement Bay in northern Pierce County. The City also contains portions of Hylebos Creek, a small independent stream that flows through the City into Commencement Bay, which is located along the north – north eastern boundary of the City. Prior to European settlement, the area was occupied and used by the Puyallup Tribe of Indians.

Historically, the area north of Interstate 5 was emergent tidal marsh land, while the area south was a combination of freshwater wetlands and uplands. Much of the southern area was used for agriculture. Wetlands were drained as a result. As land was increasingly becoming urbanized, flood control was initiated after the 1906 diversion of the White River into the Puyallup River. Channel hardening at the mouths of both the Puyallup and the Hylebos was the result and levees were constructed along much of the lower Puyallup.

During the early and mid 20th century, agriculture continued to be a primary land use but uses began shifting toward industry and commerce. The City is now zoned for residential, commercial, and industrial land uses. However, agriculture is still a permitted use in most of the City's zoning designations.

Similar to the historic marsh areas that are now the City of Fife, the Puyallup River adjacent to the City has also been significantly modified from its historic condition. This includes the construction of a hydroelectric dam, logging of forest lands and the construction of logging roads, significant and extensive agricultural practices within the floodplain, and a major flood control effort that has resulted in straightening and channel hardening of much of river below approximately river mile 28 to the mouth at Commencement Bay. This includes the installation of a complex system of levees, revetments, and dikes on both sides of the River, which greatly limits any ability for water-dependent or water-oriented developments within the City. The Hylebos Creek watershed has been extensively modified as a result of rapid growth in south King County, Federal Way, Milton, as well as northeast Tacoma and Pierce County. Kerwin (1999) characterized the Hylebos Creek basin as “one of the most heavily urbanized watersheds in the State.” The conversion of lowland forests to highly developed urban area has resulted in a significantly flashier creek with overall lower flows and seriously degraded water quality.

A. Wetlands

Many of the prominent wetlands along the Puyallup River were formed from remnant oxbows after the straightening and channel hardening of the river. The Puyallup's main wetlands within shoreline jurisdiction of Fife are the Oxbow wetland and the Sha-Dadx wetland. Both wetlands are hydrologically connected

to the Puyallup River through culverts under Levee Road. The hydrologic connections of both wetlands as well as the entire area of the Sha-Dadx wetland are within the jurisdiction of the Puyallup Tribe. In addition to these two wetland areas, there may also be other wetland areas within the floodplain of Hylebos Creek or the Puyallup River. These wetlands within the floodplain are considered shoreline associated wetlands.

The Hylebos Creek shoreline jurisdiction contains over 2.4 acres of mapped associated wetlands. These wetland areas are primarily fringe wetlands located along the banks of the Hylebos. The largest wetland area associated with Hylebos Creek within the City is located on the right bank of the Hylebos and is part of the Milgard Nature Area, a 6-acre mitigation area managed by the City.

B. Aquifers

The majority of the City is identified as being located within an aquifer recharge area according to GIS information available on the City's geographic information system maintained under contract by Pierce County. Accordingly, the Puyallup River is entirely included and the right bank of the Hylebos Creek is included within the aquifer recharge area.

C. Fish and Wildlife Habitat Conservation Areas

Along the Puyallup, the habitat conservation areas are largely related to the wetland habitat, while on the Hylebos, these areas are either riparian or related to the steep slopes landward of the riparian fringe.

Salmonid fish runs have been located in both the Puyallup and the Hylebos. As the City of Fife is located within close proximity to the mouth of both water bodies, it is believed that all anadromous fish in these systems pass through reaches within shorelines jurisdiction. Salmonid species found in the Puyallup River include spring and fall Chinook, chum, coho, pink, sockeye, and both summer and winter steelhead.

Wildlife species identified in the greater area and anticipated to also be located within the shoreline include bald eagle and great blue heron. Although great blue heron is not identified as a priority species, their breeding areas are considered as priority habitats, and some nests are found within close proximity to the Fife shoreline jurisdiction. The presence of western pond turtle has also been identified within the City though not in either the Puyallup or Hylebos shorelines jurisdiction. Of the non-salmonid species, only bald eagles are listed under the Federal Endangered Species Act. Western pond turtles have State endangered status and are Federal species of concern.

D. Geologically Hazardous Areas

Three types of geologically hazardous areas are identified in the City's Municipal Code (FMC 17.11). There are no erosion or landslide hazardous areas located on

the Puyallup's shoreline. However, much of the left bank of Hylebos and some of the right bank are identified as hazard areas. These areas extend beyond the shoreline jurisdiction. The entire Puyallup valley floor is considered as a seismic hazard area.

E. Frequently Flooded Areas

Along the Puyallup River, the levee was constructed for flood control, as well as permanent channel maintenance (see FMC 17.09). For the most part, the mapped 100-year flood plain does not extend above the levee, aside from the two most significant wetlands within the City – the Oxbow and Sha-Dadx. In addition, both banks of Hylebos Creek are within the flood zone.

F. Water Oriented Uses

The Shoreline Management Act (SMA) requires that, to the maximum extent possible, shorelines should be reserved for “water-oriented” uses including those uses that are water dependent, water related and water enjoyment uses. Due to the average water flow and depth within Hylebos Creek as well as the levee that prevents parcels adjacent to the Puyallup River from having direct shoreline access, the City of Fife is greatly limited in its ability to provide for water dependent uses. As such, the City uses this program to promote water enjoyment uses where feasible, but also allows for non-water related uses within its shoreline designations to provide for development as required within the Growth Management Act.

3. SHORELINES OF STATEWIDE SIGNIFICANCE

The Shoreline Management Act has determined certain shoreline areas to be Shorelines of Statewide Significance. According to RCW 90.58.030(2)(f), water bodies that meet the following criteria are designated as shorelines of statewide significance:

- Pacific Coast, Hood Canal and certain Puget Sound shorelines;
- All waters of Puget Sound and the Strait of Juan de Fuca;
- Lakes or reservoirs with more than 1,000 surface acres;
- Larger rivers (1,000 cubic feet per second or greater for rivers in Western Washington, 200 cubic feet per second and greater east of the Cascade crest); and
- Wetlands associated with all the above.

Within City of Fife shorelines jurisdiction, the Puyallup River meets the definition of a shoreline of statewide significance. The area waterward of the Ordinary High Water Mark is under the Jurisdiction of the Puyallup Tribe. However, with a few exceptions, the majority of the area landward of the Ordinary High Water Mark is within the City of Fife jurisdiction. Based upon RCW 90.58.020, the City of Fife gives preference to use(s) of the Puyallup river shoreline jurisdiction in the following order:

- Recognize and protect the statewide interest over local interest;
- Preserve the natural character of the shoreline;
- Result in long term over short term benefit;
- Protect the resources and ecology of the shoreline;
- Increase public access to publicly owned areas of the shorelines;
- Increase recreational opportunities for the public in the shoreline; and
- Provide for any other element as defined in RCW 90.58.100 deemed appropriate or necessary.

4. DEFINITIONS AND ACRONYMS

“Accessory Use” means a use incidental, related and clearly subordinate to the principal use of a lot or main building. An accessory use is only located on the same lot as a permitted principal use.

“Act” means the Shoreline Management Act of 1971, as amended (RCW 90.58).

"Agricultural activities" means agricultural uses and practices including, but not limited to: producing, breeding, or increasing agricultural products; rotating and changing agricultural crops; allowing land used for agricultural activities to lie fallow in which it is plowed and tilled but left unseeded; allowing land used for agricultural activities to lie dormant as a result of adverse agricultural market conditions; allowing land used for agricultural activities to lie dormant because the land is enrolled in a local, state, or federal conservation program, or the land is subject to a conservation easement; conducting agricultural operations; maintaining, repairing, and replacing agricultural equipment; maintaining, repairing, and replacing agricultural facilities, provided that the replacement facility is no closer to the shoreline than the original facility; and maintaining agricultural lands under production or cultivation.

"Agricultural products" include, but is not limited to, horticultural, viticultural, floricultural, vegetable, fruit, berry, grain, hops, hay, straw, turf, sod, seed, and apiary products; feed or forage for livestock; Christmas trees; hybrid cottonwood and similar hardwood trees grown as crops and harvested within twenty years of planting; and livestock including both the animals themselves and animal products including, but not limited to, meat, upland finfish, poultry and poultry products, and dairy products.

"Agricultural equipment" and "agricultural facilities" include, but are not limited to:

- The following used in agricultural operations: Equipment; machinery; constructed shelters, buildings, and ponds; fences; upland finfish rearing facilities; water diversion, withdrawal, conveyance, and use equipment and facilities including, but not limited to, pumps, pipes, tapes, canals, ditches, and drains;
- Corridors and facilities for transporting personnel, livestock, and equipment to, from, and within agricultural lands;
- Farm residences and associated equipment, lands, and facilities; and
- Roadside stands and on-farm markets for marketing fruit or vegetables.

"Agricultural land" means those specific land areas on which agricultural activities are conducted as of the date of adoption of the City of Fife SMP as evidenced by aerial photography or other documentation. After the effective date of the SMP, land converted to agricultural use is subject to compliance with the requirements of the SMP and SMA.

“Alteration” means a change or reconfiguration to the structure of a building; rearranging the height or length or depth of the exterior walls of a building; the movement of a structure from one location to another.

“Anadromous fish” means species, such as salmon, which are born in fresh water, spend a large part of their lives in the sea, and return to fresh water rivers and streams to procreate.

“Applicant” means an individual, partnership, corporation, association, organization, cooperative, public or municipal corporation, or agency of the state or local governmental unit, however designated.

"Appurtenance" mean a use/structure necessarily connected to the use and enjoyment of a single-family residence and is located landward of the ordinary high water mark and the perimeter of a wetland. On a statewide basis, normal appurtenances include a garage; deck; driveway; utilities; fences; installation of a septic tank and drainfield and grading which does not exceed two hundred fifty cubic yards and which does not involve placement of fill in any wetland or waterward of the ordinary high water mark. The term “appurtenance” may also be referred to as “normal appurtenance.”

“Associated wetlands” means those wetlands which are in proximity to and either influence or are influenced by tidal waters or a lake or stream subject to the Shoreline Management Act.

"Aquaculture" means the culture or farming of fish, shellfish, or other aquatic plants and animals. Aquaculture may require development such as fish hatcheries, rearing pens, and structures, as well as use of natural spawning and rearing habitats/areas. This term may also include activities related to the growing, handling, or harvesting of aquatic produce such as propagation, stocking, holding, nurturing, disease treatment, waste disposal, water use, creation of habitat and associated structures as well as similar activities.

“Best management practices (BMPs)” means methods of improving water quality that can have a great effect when applied by numerous individuals. BMPs encompass a variety of behavioral, procedural, and structural measures that reduce the amount of contaminants in stormwater runoff and in receiving waters.

“Boat launch or ramp” means graded slopes, slabs, pads, planks, or rails used for launching boats by means of a trailer, hand, or mechanical device.

“Boating facilities” generally refer to structures providing the boating public recreational opportunities on the waters of the state including but not limited to marinas, public docks, buoys, etc. Boating facilities does not refer to docks that serve four or fewer single family residences.

“Building” means any structure having a roof supported by columns, posts, or walls for the shelter, housing, or enclosure of any individual, animal, process, equipment, goods, or

materials of any kind. Manufactured homes are considered buildings. Vehicles are excluded from this definition.

“Building, detached” means a building surrounded by open space on the same lot.

“Building height” is measured from average grade level to the highest point of a structure: Provided, That television antennas, chimneys, and similar appurtenances shall not be used in calculating height, except where such appurtenances obstruct the view of the shoreline of a substantial number of residences on areas adjoining such shorelines, or the applicable master program specifically requires that such appurtenances be included: Provided further, That temporary construction equipment is excluded in this calculation.

“Channel” means an open conduit for water either naturally or artificially created, but not including artificially created irrigation, return flow, or stock watering channels.

“Channel improvement” means the enlargement of a natural stream's discharge capacity by means of straightening, making "cutoffs", cleaning vegetation, widening, or deepening, and thereby decreasing flood stages.

“City” means the City of Fife.

“Clearing” means the removal of vegetation, ground cover, shrubs and trees associated with maintenance or property modification, but not limited to, root material removal that affects the erosive potential of the soils on the site.

“Commercial development” means retail, wholesale, service, trade or other business activities.

“Council” means the City of Fife City Council.

“Cross section (drawing)” means a visual representation of a vertical cut through a structure or any other three-dimensional form.

“Dedication” means the deliberate appropriation of land by an owner for public use or purpose, reserving no other rights than those that are compatible with the full exercise and enjoyment of the public uses or purpose to which the property has been devoted.

“Designation” means the designations given specific shoreline areas based on the existing development pattern, the biophysical capabilities and limitations, and the goals and aspirations of local citizenry, as part of a Master Program.

“Development” means a use consisting of the construction or exterior alteration of structures; dredging; drilling; dumping; filling; removal of any sand, gravel, or minerals; bulkheading; pile driving; placing of obstructions; or any project of a permanent or temporary nature which interferes with the normal public use of the surface of the waters of

the state, subject to RCW 90.58 or its successor, at any state of water level [RCW 90.58.030(3)(d)].

"Development regulations" means the controls placed on development or land uses by a county or city, including, but not limited to, zoning ordinances, critical areas ordinances, all portions of a shoreline master program other than goals and policies approved or adopted under RCW 90.58, planned unit development ordinances, subdivision ordinances, and binding site plan ordinances together with any amendments thereto.

"Dike" means an embankment to prevent flooding by a stream or other waterbody.

"Director" means the Fife Director of Community Development, or his/her designee, charged with the responsibility of administering the shoreline master program.

"Dock" means a floating platform serving four or fewer single family residences which abuts the shoreline, extending waterward from ordinary high water, or from the bottom of a ramp extending from a pier, generally used as a landing or moorage place for watercraft.

"Dredged material disposal" means depositing of dredged materials on land or into water bodies. The purpose may be to create additional lands, to dispose of the by-products of dredging, or to enhance or remedy an environmental condition.

"Dredging" means removal or displacement of earth or sediments such as gravel, sand, mud or silt, and/or other materials or debris from any stream, river, lake or marine water body, and associated shorelines and wetlands. Dredging is normally performed for the specific purposes of constructing and maintaining navigation channels, turning basins, harbors and marinas; installing submarine pipelines or cable crossing; or repairing and maintaining dikes or drainage systems. Dredging can be accomplished with mechanical or hydraulic machines. Most dredging is done to maintain channel depths or berths for navigational purposes; other dredging is for shellfish harvesting or cleanup of polluted sediments.

"Dry land" means the area of the subject property landward of the Ordinary High water mark.

"Dwelling, multifamily" means a structure designed exclusively for occupancy by two or more families living separate from each other and containing two or more dwelling units.

"Dwelling, single-family" means a detached building designed exclusively for occupancy by one family and containing one dwelling unit. Includes family group homes and designated manufactured homes, as defined in FMC 19.06.260 and 19.06.465 respectively, but excludes manufactured homes which are not designated.

"Dwelling unit" means one or more rooms providing complete, independent living facilities for one family, including permanent provisions for living, sleeping, cooking and sanitation.

"Ecological functions" or "shoreline functions" means the work performed or role played by the physical, chemical, and biological processes that contribute to the maintenance of the aquatic and terrestrial environments that constitute the shoreline's natural ecosystem.

“Ecology” refers to the Washington State Department of Ecology.” Use of “Ecology” or “Washington State Department of Ecology” is preferred over “DOE” to avoid confusing the Washington State Department of Ecology with the Federal Department of Energy.

“Easement” means land which has specific air, surface or subsurface rights conveyed for use by someone other than the owner of the subject property or to benefit some property other than the subject property.

“Emergency” means an unanticipated and imminent threat to public health, safety, or the environment which requires immediate action within a time too short to allow full compliance with the master program. Emergency construction is construed narrowly as that which is necessary to protect property from the elements [WAC 173-27-040(2)(d)].

“Endangered Species Act (ESA)” means the federal legislation intended to protect any fish or wildlife species that is threatened with extinction throughout all or a significant portion of its range. (16 U.S.C. 1531-1544, 87 Stat. 884), as amended.

“Enhancement” means the manipulation of the physical, chemical, or biological characteristics of a wetland to heighten, intensify, or improve specific function(s) or to change the growth stage or composition of the vegetation present. Enhancement is undertaken for specified purposes such as water quality improvement, flood water retention, or wildlife habitat. Enhancement results in a change in wetland function(s) and can lead to a decline in other wetland functions, but does not result in a gain in wetland acres. Examples are planting vegetation, controlling non-native or invasive species, and modifying site elevations to alter hydroperiods.

“Erosion and deposition” means the removal of soils and the placement of these removed soils elsewhere by the natural forces of wind or water.

“Environmentally sensitive areas” means those areas with especially fragile biophysical characteristics and/or with significant environmental resources as identified by the city or by a scientifically documented inventory accomplished as part of the SEPA/NEPA process or other recognized assessment. Environmentally sensitive areas include, but are not limited to, aquifer recharge areas, wildlife habitat areas, fish breeding, rearing or feeding areas, frequently flooded areas, geologically hazardous areas (e.g., steep, unstable slopes), wetlands (i.e., marshes, bogs, and swamps), streams, tidal lagoons, mud flats, and salt marshes.

“Erosion” means the wearing away of land by the action of natural forces.

“Excavate” means to actively cut, or create a cavity, trench, or depression in the earth's surface, through the removal of earth.

"Exempt" means developments that are those set forth in WAC 173-27-040 and RCW 90.58.030 (3)(e), 90.58.140(9), 90.58.147, 90.58.355, and 90.58.515 which are not required to obtain a substantial development permit but which must otherwise comply with applicable provisions of the act and the local master program.

"Fair market value" of a development is the open market bid price for conducting the work, using the equipment and facilities, and purchase of the goods, services and materials necessary to accomplish the development. This would normally equate to the cost of hiring a contractor to undertake the development from start to finish, including the cost of labor, materials, equipment and facility usage, transportation and contractor overhead and profit. The fair market value of the development shall include the fair market value of any donated, contributed or found labor, equipment, or materials.

"Federal Emergency Management Administration (FEMA)" means the branch of the federal government responsible for responding to emergencies such as flood events. FEMA administers the National Flood Insurance Program, develops floodplain maps, and enforces federal regulations pertaining to flood plain management.

"Feasible" means, for the purpose of this chapter, that an action, such as a development project, mitigation, or preservation requirement, meets all of the following conditions:

- (a) The action can be accomplished with technologies and methods that have been used in the past in similar circumstances, or studies or tests have demonstrated in similar circumstances that such approaches are currently available and likely to achieve the intended results
- (b) The action provides a reasonable likelihood of achieving its intended purpose; and
- (c) The action does not physically preclude achieving the project's primary intended legal use.

In cases where these guidelines require certain actions unless they are infeasible, the burden of proving infeasibility is on the applicant.

In determining an action's infeasibility, the reviewing agency may weigh the action's relative public costs and public benefits, considered in the short- and long-term time frames.

"Fill" means the addition of soil, sand, rock, gravel, sediment, earth retaining structure, or other material to an area waterward of the OHWM, in wetlands, or on shorelands in a manner that raises the elevation or creates dry land.

"Flood control" means any undertaking for the conveyance, control, and dispersal of floodwaters caused by abnormally high direct precipitation or stream overflow.

"Floodplain" is synonymous with 100-year floodplain, this is that land area susceptible to being inundated by stream-derived waters with a one percent chance of being equaled or exceeded in any given year. The limits of this area are based on flood regulation ordinance maps or a reasonable method that meets the objectives of the Shoreline Management Act.

"Floodway" means the area, as identified in a master program, that either: (i) Has been established in federal emergency management agency flood insurance rate maps or floodway maps; or (ii) consists of those portions of a river valley lying streamward from the outer limits of a watercourse upon which flood waters are carried during periods of flooding that occur with reasonable regularity, although not necessarily annually, said floodway being identified, under normal condition, by changes in surface soil conditions or changes in types or quality of vegetative ground cover condition, topography, or other indicators of flooding that occurs with reasonable regularity, although not necessarily annually. Regardless of the method used to identify the floodway, the floodway shall not include those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or maintained under license from the federal government, the state, or a political subdivision of the state.

"Flood hazard management" means a program or major project carried out on a single parcel or coordinated on a series of parcels for the primary purpose of preventing or mitigating damage due to flooding. Flood hazard management projects or programs may employ physical and/or regulatory controls.

"FMC" means Fife Municipal Code.

"Forest Practices" means any activity conducted on or directly pertaining to forest land, and the growing, processing or harvesting of timber. These activities are generally reviewed by the Washington State Department of Natural Resources pursuant to RCW 76.09. For the purposes of this shoreline master program, this definition does not include activities such as tree marking and surveying.

"Functions and values" means the beneficial roles served by critical areas including, but are not limited to, water quality protection and enhancement, fish and wildlife habitat, food chain support, flood storage, conveyance and attenuation, ground water recharge and discharge, erosion control, wave attenuation, protection from hazards, historical and archaeological and aesthetic value protection, educational opportunities, and recreation. These beneficial roles are not listed in order of priority. Critical area functions can be used to help set targets (species composition, structure, etc.) for managed areas, including mitigation sites.

"Grading" means the movement or redistribution of the soil, sand, rock, gravel, sediment, or other material on a site in a manner that alters the natural contour of the land.

"Habitat" means the environment(s) where a plant or animal naturally or normally lives.

"Hearings Board" means the state shorelines hearings board established by the Act.

"HPA" means hydraulic project approval. The permit issued by the Washington State Department of Fish and Wildlife pursuant to the State Hydraulic Code.

"Hydric soil" means soil that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part.

"Impervious surface" is natural or manmade material on the ground that does not allow surface water to penetrate into the soil. Impervious surfaces consist of buildings, parking areas, driveways, roads, sidewalks, and any other areas of concrete, asphalt, plastic, etc.

"Industry"/"Industrial use" means uses associated with the production, processing, manufacturing, storing or fabrication of goods and/or materials.

"In-stream structure" means a structure placed by humans within a stream or river waterward of the ordinary high-water mark that either causes or has the potential to cause water impoundment or the diversion, obstruction, or modification of water flow.

"Landward" means toward dry land.

"Levee" means a large dike or embankment, often having an access road along the top, which is designed as part of a system to protect land from floods.

"Marina" means a specially designed harbor with moorings for pleasure craft and small boats.

"May" means the action is acceptable, provided it conforms to the provisions of this chapter.

"Mining" means the removal of naturally occurring materials from the earth for economic uses pursuant to RCW 78.44 and WAC 332-18.

"Mixed-use projects" means developments that combine water-dependent/water-related uses with water enjoyment uses and/or non-water-oriented uses.

"Multi-family or Multiple-family Dwelling" See Dwelling, Multiple-family.

"Native Plants" or "Native Vegetation" means plants species that naturally arise within a given habitat, and are specific and localized to the particular region.

"Nonconforming development" means a shoreline use or structure which was lawfully constructed or established prior to the effective date of the applicable Shoreline Master Program and which no longer conforms to the applicable shoreline provisions.

"Non-water-oriented uses" describes those uses which have little or no relationship to the shoreline and are not considered priority uses under the Shoreline Management Act. Non-water-oriented use examples include professional offices, automobile sales or repair shops, mini-storage facilities, multifamily residential development, department stores, and gas stations.

"Normal Appurtenance" See appurtenance.

“Normal maintenance” means those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition.

“Normal repair” means to restore a development to a state comparable to its original condition within a reasonable period after decay or partial destruction, except where repair involves total replacement which is not common practice, or causes substantial adverse effects to the shoreline resource or environment.

“Open space” means land area allowing view, use or passage that is almost entirely unobstructed by buildings, paved areas, or other man-made structures.

“Ordinary high water mark (OHWM)” means that mark that will be found by examining the bed and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, that the soil has a character distinct from that of the abutting upland in respect to vegetation as that condition existed on June 1, 1971, as it may naturally change thereafter, or as it may change thereafter in accordance with permits issued by the city or Washington State Department of Ecology; provided, that in any area where the ordinary high water mark cannot be found, the ordinary high water mark adjoining saltwater shall be the line of mean higher high tide and the ordinary high water mark adjoining fresh water shall be the line of mean high water. (See RCW 90.58.030(2)(b) or its successor and WAC 173-22-030 (11) or its successor.)

“Over-water Structure” means a device or structure projecting over the ordinary high water mark, including, but not limited to piers, docks, floats, and moorage or anchor buoys.

“Parking” is the use of land for accommodating cars, trucks, trailers and motor vehicles.

“Parking area” means any area designated and/or used for parking vehicles.

“Pedestrian orientation” pertains to facilities which encourage pedestrian movement.

“Permit” (or Shoreline Permit) means any substantial development, variance or conditional use permit, or revision, or any combination thereof, authorized by the Act, RCW 90.58 (WAC 173-27-030(13)).

“Pier” means a platform extending from a shore over water and supported by piles or pillars, used to secure, protect, and provide access to ships or boats.

“Pollutant” means any substance that has been or may be determined to cause or tend to cause injurious, corrupt, impure, or unclean conditions when discharged to surface water, air, ground, sanitary sewer system, or storm drainage system.

“Protective bulkhead” means a structure used to protect lands from erosion at or near the ordinary high water mark, but not for the purpose of creating additional upland [WAC 173-27-040(2)(c)].

"Provisions" means policies, regulations, standards, guideline criteria or shoreline designations.

"Public access" is the ability of the public to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and to view the water and the shoreline from adjacent locations. See also WAC 173-26-221(4).

"Public park" means a natural or landscaped area, provided by a unit of government, to meet the active or passive recreational needs of people.

"Public use area" means a portion of private property that is dedicated to public use and which contains one or more of the following elements: benches, tables, lawns, gardens, piers, exercise or play equipment or similar improvements or features. These elements are to provide the public with recreational opportunities in addition to the right to traverse or stand in this area.

"Public utility" means a private business organization such as a public service corporation, including physical plant facilities, performing some public service and subject to special governmental regulations, or a governmental agency performing similar public services, the services by either of which are paid for directly by the recipients thereof. Such services include, but are not limited to, water supply, electric power, telephone, cablevision, gas and transportation for persons and freight.

"RCW" means Revised Code of Washington.

"Recreation" means refreshment of body and mind through forms of play, sports, relaxation, amusement or contemplation.

"Recreational development" provides opportunities for play, sports, relaxation, amusement, or contemplation including both passive and active uses within both public and commercial developments.

"Recreational development, active" means activities that generally require the use of constructed facilities such as playgrounds, athletic fields, and hand launch boat ramps.

"Recreational development, passive" means activities that require a minimum of facilities such as swimming, picnicking, hiking, canoeing and fishing.

"Residential development" means construction or alteration of one or more buildings, structures, or portions thereof which are designed for and used to provide a place of abode for human beings. This includes single-family residences, duplexes, multi-family dwellings, apartments, condominiums, townhomes, mobile home parks, group housing, as well as normal appurtenances. Residential development also includes land divisions, including short plats, of residentially zoned land. It also includes all modifications to land and vegetation associated with construction, preparation, or maintenance of residential structures and/or

normal appurtenances. Residential development shall not include hotels or motels or other accommodation facilities.

"Restore," "restoration" or "ecological restoration" means the reestablishment or upgrading of impaired ecological shoreline processes or functions. This may be accomplished through measures including, but not limited to, revegetation, removal of intrusive shoreline structures and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the shoreline area to aboriginal or pre-European settlement conditions.

"Revegetation" means the re-planting of vegetation to repair and rebuild any vegetative communities that have been disturbed during the construction process. This vegetation shall be regularly maintained to ensure its survival.

"Revetment" means a sloping structure built to protect a scarp, embankment, or shore against erosion by waves or currents. Usually built of riprap, with a heavy armor layer, one or more filter layers of smaller rock or filter cloth, and "toe" protection. A revetment slopes shoreward and has a rough or jagged facing. Its sloping face absorbs wave energy and differentiates it from a bulkhead, which is a vertical structure.

"Riparian area" means the interface between upland area and a waterbody, such as a river or creek.

"Riprap" means a layer, facing, or protective mound of stones placed to prevent erosion, scouring, or sloughing of a structure or embankment.

"Salmon and steelhead habitats" means gravel bottomed streams, creeks, and rivers used for spawning; streams, creeks, rivers, side channels, and wetlands used for rearing, feeding, and cover and refuge from predators and high water.

"Sediment" means the fine-grained material deposited by water or wind.

"Setback" means the required distance measured horizontally from the ordinary high water mark to any allowed development. The setback shall be unoccupied by structures or intrusions except when specifically permitted by this program.

"Shall" indicates a mandate; the particular action must be done.

"Shorelands" or "shoreland areas" means those lands extending landward for two hundred feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward two hundred feet from such floodways; and all wetlands and river deltas associated with the streams, lakes, and tidal waters which are subject to the provisions of this chapter; the same to be designated as to location by the Washington State Department of Ecology.

“Shoreline conditional use” means a use or development which is specifically listed by this master program as a conditional use within a particular shoreline designation.

“Shoreline designation(s)” means the category of shoreline established by the City of Fife Shoreline Master Program to provide a uniform basis for applying policies and use regulations within distinctively different shoreline areas. This classification system shall be based on the existing use pattern, the biological and physical character of the shoreline, and the goals and aspirations of the community as expressed through comprehensive plans as well as the Shoreline Management Act RCW 90.58 and the Master Program Guidelines, WAC 173-26. For purposes of this Program “shoreline designation” is used in place of the term “shoreline environment designation” referred to in WAC 173-26.

“Shoreline Functions” see ecological functions.

“Shoreline Management Act” means the Shoreline Management Act of 1971, RCW 90.58, as amended.

“Shoreline Master Program” means the comprehensive shoreline plan for the City of Fife, and the use regulations, together with maps, diagrams, charts or other descriptive material and text, a statement of desired goals and standards developed in accordance with the policies enunciated in RCW 90.58.

“Shoreline modification” means those actions that modify the physical configuration or qualities of the shoreline area, usually through the construction of a physical element such as a dike, breakwater, pier, weir, dredged basin, fill, bulkhead, or other shoreline structure. They can include other actions, such as clearing, grading, or application of chemicals.

“Shoreline permit” means a substantial development, conditional use, revision, variance, or any combination thereof or its successor.

“Shoreline stabilization and flood protection” means actions taken to reduce adverse impacts caused by current, flood, wake, or wave action. These actions include all structural and nonstructural means to reduce impacts due to flooding, erosion, and accretion. Examples of specific structural and nonstructural shoreline stabilization activities include revetments, vegetation planting, riprap, installation and anchoring of large wood debris, bulkheads, and bank stabilization. Enlargement of an existing shoreline stabilization measure shall be considered a new shoreline stabilization measure.

“Shoreline substantial development permit” means the permit required for all substantial developments as defined in RCW 90.58.030(3)(e).

“Shoreline variance” means a procedure to grant relief from the specific bulk, dimensional or performance standards set forth in this master program, and not a means to allow a use not otherwise permitted within a shoreline designation.

"Shorelines" means all of the water areas of the state, including reservoirs, and their associated shorelands, together with the lands underlying them; except (i) shorelines of statewide significance; (ii) shorelines on segments of streams upstream of a point where the mean annual flow is twenty cubic feet per second or less and the wetlands associated with such upstream segments; and (iii) shorelines on lakes less than twenty acres in size and wetlands associated with such small lakes.

"Shorelines hearings board" means a six-member, quasi-judicial body, which hears appeals by any aggrieved party on the issuance of a shoreline permit.

"Shorelines of the state" means the total of all "shorelines" and "shorelines of statewide significance" within the state.

"Shorelines of statewide significance" means shorelines of the state that meet the criteria for shorelines of statewide significance contained in RCW 90.58.030(2)(e).

"Should" means that the particular action is required unless there is a demonstrated, compelling reason, based on policy of the Shoreline Management Act and this chapter, against taking said action.

"Sign" means any commercial or noncommercial communication device, structure, or fixture that is intended to aid an establishment in promoting the sale of a product, good or service using graphics, symbols, or written copy (including the name of a business). Directional and incidental signs are considered signs for the purpose of this Program.

"Solid waste" means solid and semi-solid wastes, including garbage, rubbish, ashes, industrial wastes, wood wastes, and sort yard wastes associated with commercial logging activities, swill, demolition and construction wastes, abandoned vehicles and parts of vehicles, household appliances, and other discarded commodities. Solid waste does not include wastewater, dredge material, agricultural, or other commercial logging wastes not specifically listed above. See "Landfill" and "Dredged material disposal".

"Stream" means a naturally occurring body of periodic or continuously flowing water that is generally located in a channel.

"Structure" means a permanent or temporary edifice or building, or any piece of work artificially built or composed of parts joined together in some definite manner, whether installed on, above, or below the surface of the ground or water, except for vessels.

"Substantial development" shall mean any development of which the total cost or fair market value exceeds five thousand seven hundred eighteen dollars, or any development which materially interferes with the normal public use of the water or shorelines of the state. The dollar threshold established in this definition, which in turn is based upon the text found in RCW 90.58.030(3)(e), must be adjusted for inflation by the office of financial management every five years, beginning July 1, 2007, based upon changes in the consumer price index during that time period. For the purposes of this definition, "Consumer price

index" means, for any calendar year, that year's annual average consumer price index, Seattle, Washington area, for urban wage earners and clerical workers, all items, compiled by the bureau of labor and statistics, United States department of labor. The office of financial management must calculate the new dollar threshold and transmit it to the office of the code reviser for publication in the Washington State Register at least one month before the new dollar threshold is to take effect.

“Threatened or endangered species” means native species that are listed in rule by the Washington State Department of Fish and Wildlife as threatened or endangered, or that are proposed to be listed as threatened or endangered or that are listed as threatened or endangered under the federal Endangered Species Act.

“Transportation facilities” means those structures and developments that aid in land and water surface movement of people, goods, and services. Within the City of Fife, transportation facilities include roads and highways, bridges and causeways, railroad facilities, and other related facilities. Bikeways and trails are considered recreational uses.

“Upland” means the area above and landward of the ordinary high water mark, excluding wetlands.

“Utilities” are services that produce, transmit, carry, store, process or dispose of electric power, petroleum, natural gas, water, sewage, communications, etc.

“WAC” means Washington Administrative Code.

"Water-dependent use" means a use or portion of a use which cannot exist in a location that is not adjacent to the water and which is dependent on the water by reason of the intrinsic nature of its operations.

"Water-enjoyment use" means a recreational use or other use that facilitates public access to the shoreline as a primary characteristic of the use; or a use that provides for recreational use or aesthetic enjoyment of the shoreline for a substantial number of people as a general characteristic of the use and which through location, design, and operation ensures the public's ability to enjoy the physical and aesthetic qualities of the shoreline. In order to qualify as a water-enjoyment use, the use must be open to the general public and the shoreline-oriented space within the project must be devoted to the specific aspects of the use that fosters shoreline enjoyment.

“Water-oriented use” means a use that is a water-dependent, water-related, or water-enjoyment use.

“Water-related use” means a use that is not intrinsically dependent on a waterfront location but whose operation cannot occur economically without a waterfront location.

"Wetland" or "wetlands" means areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal

circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from nonwetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from nonwetland areas created to mitigate conversion of wetlands. When required, wetlands shall be categorized utilizing the *Washington State Wetland Rating System for Western Washington – Revised*. Washington State Department of (Ecology Publication # 04-06-025, 2004).

Unlisted Words or Phrases

Any word or phrase not defined in Section 4 that is called into question when administering this program shall be defined utilizing RCW 90.58 Shoreline Management Act of 1971 and its implementing rules.

Secondary definition sources may be obtained from one of the following sources:

- Fife Municipal Code.
- Any City resolution, ordinance, policy, or regulation.
- The most applicable statute or regulation from the state of Washington.
- Legal definitions generated from case law or provided within a law dictionary.
- The common dictionary.

5. SHORELINE MASTER PROGRAM ELEMENTS

A. Economic Development Element

1. **Purpose:** Provide an area for the location and design of industries, industrial projects of statewide significance, transportation facilities, port facilities, tourist facilities, commerce and other developments that are particularly dependent on their location on or use of the Shorelines of the State [RCW 90.58.100(2)(a)].
2. **Goal:** Promote economic growth by encouraging economic activities that will result in minimum disruption to the quality of the shoreline environment. Although water-dependent, water-oriented and water enjoyment uses are encouraged within the City, the average water flows within the Hylebos, the varying jurisdictions along the Puyallup as well as the situation of the levee and associated roadway along the Puyallup generally preclude water dependent uses as well as the need for water oriented business uses. However, water enjoyment uses, such as viewing and other recreational uses and/or mixed use developments that provide for water enjoyment shall be encouraged. In addition, it is a goal of the City to maintain the flood protection provided by the levee within the

shoreline area of the Puyallup River to ensure that economic growth is not threatened by flood events.

3. General Policies:

- a. Maintain current uses that have limited impacts upon the ecological functions and values of shoreline areas, while providing for new environmentally sensitive development.
- b. Provide incentives for public/private partnerships designed to enhance property values and provide public amenities.
- c. Review proposed economic use of the shoreline for consistency with the Comprehensive Plan and the Program.

B. Public Access Element

1. **Purpose:** Provide public access to publicly owned shoreline areas [RCW 90.58.100(2)(b)].
2. **Goal:** To provide for public access to publicly owned shoreline areas, except where deemed inappropriate due to safety hazards, inherent security problems, environmental impacts, conflicts with adjacent uses, or where public access may reduce the effectiveness of flood storage or levee protections.

3. **General Policies:**

- a. Where appropriate, encourage the development of public access to all shorelines of statewide significance.
- b. Expand the shoreline public access opportunities consistent with the character, functions, and values of the shoreline and the uses contemplated in the Fife Comprehensive Plan.
- c. Minimize shoreline public access to fragile shoreline areas.
- d. Protect and preserve the natural features of the shoreline within public access design.
- e. Minimize conflicts of public access areas and trails with water dependent uses along the shoreline, including levee function and flood hazard protection.
- f. Consider public access in the review and approval of all development projects.
- g. Respect private property rights in the design and planning of public access areas ensuring that privacy and security is not unduly infringed upon.
- h. Limit the right to enter upon or cross private property as public access to shorelines, with the exception of dedicated public easements.
- i. Limit the uses allowed on publicly owned shorelines to water-dependent, public recreation uses and protected open space.
- j. Ensure that development uses and activities on or near the shoreline do not impair or detract from the public's visual or physical access to the water.
- k. Ensure that development uses and activities on or near the shoreline, such as public access, do not impair flood hazard protection.
- l. Encourage preservation and enhancement of the public's visual access to the City of Fife's shoreline areas.
- m. Purchase for public use shoreline areas that hold unique value for public enjoyment, and that provide public access areas of sufficient size to allow passage and allow the visitor to enjoy the setting.

4. Specific Policies:

Location

- a. Acquire property to provide public access to the shoreline.
- b. Connect shoreline access to other public areas or public thoroughfares.
- c. Identify, develop and connect public access points to the shoreline providing for greater connectivity.

Design

- d. Ensure that the physically handicapped are not precluded from enjoying unfettered access to the City's shorelines.
- e. Ensure that public access and facilities are safe, durable, and require a low level of operation and maintenance.
- f. Construct public access improvements with environmentally friendly materials and support healthy natural processes, whenever financially feasible and possible.
- g. Utilize materials for pedestrian pathways and other pedestrian amenities that are contextual to the surrounding character of the site.
- h. Avoid excess removal of shoreline vegetation.
- i. Incorporate educational opportunities along the shoreline through the identification of unique natural features.
- j. Use signs appropriate to the character of the area to indicate public access.
- k. Design public access to provide for public safety and to minimize potential impacts to private property and individual privacy. This may include providing a physical separation to reinforce the distinction between public and private space, achieved by providing adequate space, through screening with landscape planting or fences, or other means.

Views

- l. Maintain and enhance visual access to the shoreline and existing view shed corridors.

- m. Ensure that parking facilities do not detrimentally impact views to the shoreline.
- n. Provide informal seating areas at identified public vistas.

C. Recreation Element

1. **Purpose:** Preserve and expand recreational opportunities, including but not limited to parks, tidelands, beaches, and recreational areas [RCW 90.58.100(2)(c)].
2. **Goal:** Develop public and private recreation opportunities that are compatible with adjacent uses and without adversely impacting the ecological functions and values of the shoreline.
3. **General Policies:**
 - a. Assist the City and State in acquiring shoreline areas appropriate for public recreation.
 - b. Provide for both active and passive recreational needs in the development of recreational areas.
 - c. Prohibit recreational uses and facilities that threaten the functions and values of the shoreline.
 - d. Continue to work with Pierce County, the City of Tacoma, and the Puyallup tribe to encourage preservation and expansion of recreational activities for the public on the Puyallup River.

4. Specific Policies:

Trails and Open Space

- a. Encourage and accommodate for multiple functions within the open space and trails system such as stormwater management, viewpoints, wildlife habitat and passive recreation.
- b. Recognize and expand the inventory of trails within the City.
- c. Provide educational opportunities, emphasizing the natural history of the shorelines.
- d. Ensure that all new trails and interpretive signage does not interfere with the existing wildlife habitat of the area.
- e. Develop and adopt standards regarding trail uses that minimize conflicts between different types of trail users.

- f. Prohibit the use of off-road vehicles on trails within shorelines jurisdiction.

D. Circulation Element

1. **Purpose:** Provide for multi-modal circulation opportunities by planning for the general location and extent of existing and proposed major thoroughfares, transportation routes, and other public utilities and facilities, all consistent with the Shoreline Use Element [RCW 90.58.100(2)(d)].
2. **Goal:** Provide safe and adequate vehicular circulation systems to shorelines where routes will have the least possible adverse effect on unique or fragile shoreline features and existing ecological systems, while contributing to the functional and visual enhancement of the system.
3. **General Policies:**
 - a. Connect the City’s shorelines and upland areas through an efficient and safe multi-modal circulation system.
 - b. Accommodate pedestrian, bicycle, and vehicular traffic through an integrated transportation system.
 - c. Minimize the impacts of the circulation system to the natural features of the shoreline.
 - d. Locate parking facilities as far upland from the shoreline as feasible.
 - e. Minimize the impacts of transportation and parking facilities on the shoreline ecology.
 - f. Utilize shared parking facilities where possible to minimize impervious surfaces within shoreline areas.

E. Shoreline Use Element

1. **Purpose:** Identify areas associated with the general distribution, location and extent of the use on shorelines and adjacent land areas for housing, business, industry, transportation, recreation, education, and other categories of public and private uses of the land [RCW 90.58.100(2)(e)].
2. **Goal:** Ensure that land use patterns will locate activity and development in areas of the shoreline that will be compatible with adjacent uses and will be sensitive to existing shoreline environments, habitat, and ecological systems.

3. **General Policies:**

- a. Identify future demand for shoreline space and potential use conflicts based on characterization of current shoreline use patterns and projected trends.
- b. Ensure that all new development in shoreline areas is consistent with the City of Fife Comprehensive Plan, Zoning Code, the Shoreline Management Act, and the Washington State Growth Management Act.
- c. Manage preferred shoreline uses to maintain or enhance the ecological functions and values of shoreline areas and the character of the zones in which they are located.
- d. Ensure that uses allowed on upland areas result in no net loss to the functions and values of the shoreline ecology.
- e. Encourage the restoration of shoreline areas that have been degraded or diminished in ecological value and function as a result of past use. On the Puyallup River, such restoration should not compromise the function of the levee to perform its flood prevention purpose.
- f. Ensure that building design, height, bulk, and scale requirements respond to the surrounding character of the district.
- g. Encourage signage, lighting and landscaping that are appropriate to the context of the surrounding area.
- h. Avoid uses that would prevent the establishment of the preferred shoreline uses as established by the Shoreline Management Act.
- i. Encourage sustainable residential development techniques.
- j. Discourage residential clearing activities that threaten the stability of the shoreline ecology.
- k. Perform in-water construction, development, or activity as approved by the City of Fife with input from interested state agencies.
- l. Developments and redevelopments should prevent, control or otherwise treat stormwater consistent with state and local standards.

F. Conservation Element

1. **Purpose:** Preserve natural resources, including but not limited to scenic vistas, water quality, aesthetics, and areas for fisheries and wildlife protection [RCW 90.58.100(2)(f)].
2. **Goal:** Utilizing the best available information, create development regulations, design standards, and best management practices that will ensure no net loss as well as the long-term enhancement of unique shoreline features, natural resources, and fish and wildlife habitat.
3. **General Policies:**
 - a. Prevent interference with the natural dynamic processes of shoreline formation and change, except for compelling reasons of public necessity or benefit. Preserving the functional integrity of the levee is a compelling reason of public benefit.
 - b. Achieve no-net-loss of ecological function relevant to the baseline established by the Inventory and Characterization document (Appendix C).
 - c. Protect and enhance wildlife habitats while providing areas for residents to view and learn more about their natural surroundings.
 - d. Protect fish and wildlife habitat and water quality through the use of low impact development techniques.
 - e. Protect, restore, and enhance shoreline processes, functions, and critical habitats by utilizing both regulatory and non-regulatory methods such as native vegetation shoreline setbacks, city purchase of key properties, development regulations, and incentive and education programs to encourage site design and use that promotes the area's ecology.
 - f. Require discharges within shorelines jurisdiction shall meet or exceed the treatment standards of the City of Fife's surface water manual.
 - g. Enhance degraded shorelines.
 - h. Require to control erosion and stormwater runoff to minimize degradation of the shoreline through the use of temporary erosion and sedimentation control during construction and permanent erosion and sedimentation control after site stabilization.
 - i. Require the minimization of noise and glare impacts to aquatic and upland habitats.

- j. Work with adjacent jurisdictions to develop regional policies for protecting shoreline ecological functions while also allowing for development.
- k. Require that all shoreline development located along Hylebos Creek avoid or minimize the need for shoreline stabilization measures and flood protection works, such as bulkheads, revetments, dikes, levees, or substantial site re-grading. Where measures and works are demonstrated to be necessary, non-structural, natural techniques shall be the preferred design option unless demonstrated to be infeasible or where other alternatives will provide less impact to the shoreline environment.
- l. Require that all shoreline development be located, designed, constructed, operated, and managed in such a way as to minimize interference with natural shoreline processes, such as water circulation and erosion.

4. Specific Policies:

Earth

- a. Carefully evaluate developments that alter the topography of the shoreline to ensure no increase in the frequency or severity of downstream flooding.
- b. Prohibit alterations to the topography of shoreline areas that would exacerbate erosion.

Water

- c. Require shoreline development and activity to minimize impacts on hydrogeologic processes, surface water drainage, and groundwater recharge.
- d. Protect shorelines from all sources of pollution, including, but not limited to sedimentation and siltation, petrochemical use and spillage, and storage of wastes and spoils.
- e. Consider alternatives to the use of chemical fertilizers, herbicides, and pesticides as a preferred Best Management Practice (BMP) for lawns and other vegetation maintained within the shoreline.

Plants and Animals

- f. Require projects to avoid the removal of trees in shorelines, wherever practicable and to minimize the removal of other woody vegetation.

- g. Require mitigation for the loss of fish and wildlife resources, natural systems, including riparian vegetation, wetlands, and sensitive areas.

Noise

- h. Prevent noise levels from interfering with the quiet enjoyment of the shoreline.
- i. Consider ambient noise levels when evaluating a shoreline permit application. Shoreline developments that would increase noise levels to the extent that the natural character of the shoreline would be disrupted shall be prohibited.

G. Historic, Cultural, Scientific, and Educational Element

1. **Purpose:** Protection and restoration of buildings, sites, and areas having historic, cultural, scientific, or educational values [RCW 90.58.100(2)(g)].
2. **Goal:** Ensure the recognition, protection, preservation and restoration of shoreline areas and create a unique “sense of place” for public facilities, recreation areas in the shoreline jurisdiction.
3. **General Policies:**
 - a. Ensure the Puyallup Tribe of Indians and the Department of Archaeology and Historic Preservation have the opportunity to review projects with the potential to affect archaeological, historic and cultural sites or buildings in shoreline areas.
 - b. Encourage educational projects and programs that foster a greater appreciation of the importance of shoreline management and environmental conservation.
 - c. Require that developers and property owners immediately stop work and notify the City of Fife, State Office of Archaeology and Historic Preservation, and Puyallup Tribe of Indians if archaeological resources are uncovered during excavation.
 - d. Require that permits issued in areas documented to contain archaeological resources require a site inspection or evaluation by a professional archaeologist in coordination with the City of Fife, State Office of Archaeology and Historic Preservation, and Puyallup Tribe of Indians.
 - e. Consider Areas of Historic, Cultural, Scientific and Educational importance for utilization within recreation and public park planning.

- f. Where appropriate, restore unique educational or culturally significant features to enhance the value of the shorelines.

H. Flood Prevention Element

1. **Purpose:** Recognize statewide interests over individual interests in the prevention and minimization of flood damages [RCW 90.58.100(2)(h)].
2. **Goal:** Protect the City of Fife from losses and damage created by flooding.
3. **General Policies:**
 - a. Seek regional solutions to flooding problems through coordinated planning with federal, state, and county agencies, other appropriate interests, and the public.
 - b. Ensure that flood hazard protection projects having a positive environmental benefit that emphasize long-term solutions over short term solutions.
 - c. Undertake flood management planning in a coordinated manner among affected property owners and public agencies.
 - d. Ensure that the removal of gravel for flood control in the Puyallup River and the Hylebos Creek is permitted only if biological and/ or geomorphological studies demonstrate there will be a long-term benefit to flood hazard reduction and that ecological functions will not be detrimentally affected. The extraction of gravel must also be part of a comprehensive flood management solution.
 - e. Give preference to non-structural flood control solutions over structural flood control devices along Hylebos Creek.
 - f. Analyze non-structural surface water management measures, before employing structural surface water management structures in shoreline areas.
 - g. Where new structural public flood hazard reduction measures, such as levees, are necessary, require the dedication and improvement of public access pathways unless public access improvements would cause unavoidable health or safety hazards to the public, inherent and unavoidable security problems, unacceptable and immitigable significant ecological impacts, unavoidable conflict with the proposed use, or a cost that is disproportionate and unreasonable to the total long-term cost of the development.

- h. Balance the protection and preservation of the aquatic environment and the habitats it provides with the City's responsibility to ensure protection of life and property from damage caused by flooding.

6. SHORELINE DESIGNATIONS

A. Introduction

Through the Shoreline Management Act of 1971 (RCW 90.58), the City of Fife has been given the authority to manage its shorelines through this Shoreline Master Program. The shoreline designations herein are based on the guidelines, WAC 173-26, issued by the Washington State Department of Ecology as adapted to conditions specific to Fife's shorelines. For purposes of this Program "shoreline designation" is used in place of the term "shoreline environment designation" referred to in WAC 173-26.

B. Summary of Shoreline Designations

The City of Fife's shoreline classification system consists of five shoreline designations. Each shoreline designation has specific criteria, such as amount of intact shoreline function and existing development and type of land use, that are used to assign a designation to a corresponding area of shoreline. Through the use of these shoreline designations, the City of Fife intends to assure that existing shoreline ecological functions are maintained as identified in the Inventory and Characterization document. Such designations should also be consistent with policies for restoration of degraded shorelines. The five shoreline designations are:

- Conservancy;
- Shoreline Residential;
- Urban;
- Levee; and
- Aquatic.

C. Official Shoreline Map

The Official Shoreline Map shall be housed by the City of Fife Community Development Department. Additionally, a map of the shoreline designations is included on the Shorelines Designation Map within this document (see Appendix A: Shorelines Designation Map). The shoreline jurisdiction shall be defined as the floodway plus 200 feet and shall not include critical area buffers located outside of the shoreline jurisdiction as described in RCW 90.58.030(2)(d). The critical area buffers located outside of the shoreline jurisdiction shall be addressed pursuant to the requirements of FMC Title 17 – Environmental Protection.

In the event that there is an error in the preparation of the Shorelines Designation Map, the City of Fife will rely upon common boundary descriptions and the

criteria contained in RCW 90.58.030(2) and WAC 173-22 pertaining to determinations of shorelands.

D. Written Descriptions

A map depicting the City of Fife's shoreline designations is included in Appendix A: Figure 2. The Shoreline Designations Map overlaid to the existing land uses is included as Appendix A: Figure 3. The purpose of these maps is to identify the shoreline designations and is based upon the best mapping data available at the time of this update. As such, this map may not necessarily identify or depict the lateral extent of the shoreline jurisdiction or all of the associated wetlands. The extent of the shoreline jurisdiction shall be determined on a case-by-case basis based upon the location of the Ordinary High Water Mark, floodway, and presence of associated wetlands.

1. **Conservancy:** The west bank of the Hylebos Creek from the northern City limit to 4th Street East located in Northwest Quarter of Section 6, Township 20 North, Range 4 East; Both the east and west banks of Hylebos Creek from 4th Street East south to the perpendicular intersection of 62nd Avenue East located in Northwest Quarter of Section 6, Township 20 North, Range 4 East, WM; The small portion of the west side of the Hylebos from 62nd Avenue East to 10th Street East also located in Northwest Quarter of Section 6, Township 20 North, Range 4 East, WM; The entire east bank of the Hylebos within the city limits; and The Sha-Dadx and Oxbow wetlands associated with the Puyallup River.¹
2. **Shoreline Residential:** That portion of the west side of the Hylebos Creek from 10th Street East (northern boundary) to the north side of 12th Street East located in Northwest Quarter of Section 6, Township 20 North, Range 4 East, WM
3. **Urban:** Generally, 200 feet landward of the west side of Hylebos Creek from the south side of 12th Street East down to the southeast boundary of the City, just north of Pacific Highway. In addition to the small portion of the south side of Hylebos Creek just north of Interstate-5 to the southeastern boundary of the City also located in Northwest Quarter of Section 6, Township 20 North, Range 4 East, WM.
4. **Levee:** Generally, 200 feet landward from the ordinary high water mark along the north side of the Puyallup River from west City Limits at the intersection of 20th Street East in Northeast Quarter of Section 11, Township 20 North, Range 3 East, WM to the eastern City limits located

¹ The hydrologic connections of both the Oxbow and Sha-Dadx wetlands as well as the entirety of the Sha-Dadx wetland are under the jurisdiction of the Puyallup Tribe, including any buffers that the tribe may prescribe. Although no development activities are anticipated at this time, the conservancy designation has been provided under this SMP update to address any non-tribal jurisdiction actions that may be taken in this area that will be under review by the City.

in Northeast Quarter of Section 20, Township 20 North, Range 4 East, WM.

5. **Aquatic:** The area waterward between the ordinary high water marks of Hylebos Creek. Note: the area waterward of the ordinary high water mark of the Puyallup River would also be designated aquatic. However, this area is owned by the Puyallup Indian Tribe and is therefore subject to the designation processes of that jurisdiction.

E. Interpretation of Shoreline Designation Boundaries

1. Shoreline Designation Boundaries shall be identified primarily by Appendix A: Figure 2 of this document and secondarily by the written descriptions provided in Chapter 5 (B) of this document.
2. Shoreline Designation Boundaries shall be construed as following parcel, tract, and/or section lines as applicable.
3. Shoreline Designation Boundaries which follow roads shall be respectively considered to follow centerlines.
4. All shoreline areas waterward of the OHWM shall be designated aquatic.
5. Upland shoreline designations shall apply to the shorelands.
6. As noted in Chapter 5 (A) of this document, all areas that are not mapped shall be automatically designated Conservancy consistent with WAC 173-26-211(2)(e) until that time in which the City of Fife can fully evaluate the shorelands and amend its plan. Map changes must be approved by the City of Fife and the Washington State Department of Ecology.

F. Conservancy

1. **Purpose:** The Conservancy shoreline designation consists of areas that have been modified from their natural state, but have retained significant ecological functions.
2. **Designation Criteria:** The Conservancy designation is applied to shoreline areas that have been modified from their natural state, but have retained significant ecological functions. These lands often have historic or culturally significant resources that require preservation respectful of the modified natural environment. If, due to annexation, any new shoreline areas become part of the City they will automatically be designated as Conservancy until the property undergoes the appropriate planning process.

The shorelines of the Conservancy designation contain the following characteristics:

- a. The shoreline retains important ecological functions, even though partially developed;
- b. The shoreline has potential for ecological restoration;
- c. The shoreline has the potential for development that is compatible with ecological restoration;
- d. Areas considered critical wildlife habitat because they are currently documented as providing one of the following functions:
 1. Providing food, water or cover and protection for any rare, endangered or threatened species, or for significant populations of flora or fauna during critical stages of their life cycle; or
 2. Serving as a seasonal habitat for concentrations of native fish and wildlife (e.g., migration routes, breeding sites, or spawning sites).
- e. Areas possessing severe development limitations, due to the presence of critical environmental features including:
 1. Erosion hazard areas;
 2. Wetlands; and/or
 3. Frequently flooded areas.

3. **Management policies:** The following policies generally characterize the management goals of the Conservancy designation.
- a. Prohibit developments and uses that would degrade or deplete the biological resources of the area.
 - b. Allow uses that preserve the natural character of the area or promote preservation of open space, floodplain or sensitive lands.
 - c. Allow uses that result in restoration of ecological functions.
 - d. Allow recreation uses such as wildlife viewing trails and passive recreational parks, provided such uses result in no net loss of ecological functions or values.
 - e. Encourage conservation and/or restoration projects, such as conserving, enhancing, or re-creating ecological functions in those opportunity areas referenced in the Inventory and Characterization (Appendix C) and Restoration Plan (Appendix D) documents.
 - f. Discourage roads, utility corridors, and parking areas in areas designated Conservancy.
 - g. Allow low-intensity scientific, historical, cultural, educational research, and water-oriented recreational access uses; provided the proposal results in no net loss of ecological functions.
 - h. Develop standards to ensure that development does not result in a net loss of shoreline ecological functions or further degrade other shoreline values. Standards should be established for:
 - 1. Shoreline stabilization measures;
 - 2. Vegetation conservation;
 - 3. Water quality; and
 - 4. Shoreline modifications.
 - i. Encourage efforts during development and redevelopment to restore “properly functioning conditions” for species listed as threatened and endangered under federal and state regulations and other ecological functions.
 - j. Encourage the use of soft bank shoreline stabilization techniques over engineered, hardscape stabilization measures.

- k. Allow the construction of structural shoreline stabilization and flood control works only when mitigation is applied and where there is a documented need to protect an existing structure or ecological functions.
- l. Require that surface water management facilities be designed and constructed in a manner that ensures that all known contaminants are treated before entering groundwater or drainage to shoreline areas.
- m. Ensure that new uses result in no net loss in the ecological functions and values of the shoreline.
- n. Prohibit shoreline modifications requiring significant vegetation removal that would reduce the capability of vegetation to perform normal ecological functions.
- o. Allow discharge of surface water to wetlands which are hydrologically connected to shoreline areas only if designated Category III or IV wetlands.
- p. Require project consistency with the City of Fife Stormwater program and stormwater manual.
- q. Provide for public access whenever feasible to do so in conjunction with ecological restoration opportunities.
- r. Require public access for the development or redevelopment of all non water-dependent development except where deemed inappropriate due to safety hazards, inherent security problems, environmental impacts, or conflicts with adjacent uses.
- s. Preserve and protect cultural and historical resources.
- t. Allow low-intensity recreational uses that are designed and constructed in a manner that respects the limiting environmental condition and does not degrade or deplete resources;
- u. Protect those shoreline areas that possess unique or fragile features which are relatively free of human influence or that include intact or minimally degraded shoreline functions;

4. Regulations

a. Use Regulations

1. Permitted, Conditional and Prohibited uses are identified within Section 8 - Shoreline Use Matrix. All shoreline development and use shall comply with Section 7 – General Regulations and Section 9 Use Specific Regulations, as applicable.

Permitted uses shall result in no net loss of shoreline ecological functions and shall not degrade other shoreline values.

2. Prohibited Uses: Uses not identified as permitted or conditional are prohibited from being located within the Conservancy designation; unless the Director deems the use as substantially similar to a permitted, conditional, or accessory use. The Director shall consult with the Department of Ecology prior to issuing formal written interpretations consistent with the purpose and intent of RCW 90.58 and the applicable guidelines.

b. Bulk and Dimensional Regulations

Unless the presence of critical areas would require a more restrictive shoreline setback.

Maximum Height:	30 feet or 2 stories, whichever is less
Minimum Shoreline Setback as measured landward from the Ordinary High Water Mark)*:	100 feet (Water Dependent Uses, including public access – 0 feet)
Maximum Impervious Surface:	25 percent

* unless the presence of critical areas would require a more restrictive shoreline setback.

G. Shoreline Residential

1. **Purpose:** The purpose of the Shoreline Residential designation is to accommodate residential land uses and provide protection and restoration of ecological functions.
2. **Designation Criteria:** The Shoreline Residential designation is applied to shoreline areas that are characterized with a pattern of predominantly single-family or multi-family residential development or are planned and platted for residential uses. These areas contain the following characteristics:

- a. The shoreline contains or is proposed for residential development; and
- b. The shoreline does not contain significant environmental hazards or sensitive areas.

3. Management policies: The following policies generally characterize the management goals of the Shoreline Residential designation.

- a. Provide priority use to single-family residences only when developed in a manner consistent with control of pollution and prevention of damage to the natural environment.
- b. Require multi-family, subdivisions of four lots or greater, and recreational developments to provide public access and joint use for community recreational facilities.
- c. Require surface water management facilities to be designed and constructed in a manner ensuring that contaminants are treated before entering groundwater.
- d. Require new development to be located and designed so that future shoreline stabilization is not necessary.
- e. Ensure that access, utilities, and public services should be available and adequate to serve existing needs and/or planned future development.
- v. Encourage conservation and/or restoration projects, such as conserving, enhancing, or re-creating ecological functions in those opportunity areas referenced in the Inventory and Characterization (Appendix C) and Restoration Plan (Appendix D) documents.

4. Regulations

- a. Use Regulations
 - 1. Permitted, Conditional and Prohibited uses are identified within Section 8 - Shoreline Use Matrix. All shoreline development and use shall comply with Section 7 – General Regulations and Section 9 Use Specific Regulations, as applicable.

Permitted uses shall result in no net loss of shoreline ecological functions and shall not degrade other shoreline values.

2. Prohibited Uses: Uses not identified as permitted or conditional are prohibited from being located within the Shoreline Residential designation; unless the Director deems the use as substantially similar to a permitted, conditional, or accessory use. The Director shall consult with the Department of Ecology prior to issuing formal written interpretations consistent with the purpose and intent of RCW 90.58 and the applicable guidelines.

b. Bulk and Dimensional Regulations

Maximum Height:	30 feet or 2 stories, whichever is less
Minimum Shoreline Setback (as measured landward from the Ordinary High Water Mark)*:	50 feet (Water dependent uses, including public access – 0 feet)
Maximum Impervious Surface:	30 percent

* unless the presence of critical areas would require a more restrictive shoreline setback.

H. Urban

1. **Purpose:** The purpose of the Urban designation is to accommodate high intensity commercial, industrial, and residential land uses and provide protection and restoration of ecological functions.

Due to the position of the Urban designation along un-navigable waters of Hylebos Creek, the City of Fife is precluded from having water dependent uses within this designation. As such, the City uses this program to promote water enjoyment uses where feasible, but also allows for non-water related uses within it shoreline designations to provide for development as required within the Growth Management Act.

2. **Designation Criteria:** The Urban designation is applied to shorelines that exhibit the following characteristics:

- a. Areas that can support high-intensity uses without degradation to existing shoreline function;
- b. Shorelines used or designated by zoning for high intensity commercial, industrial, or multi-family development; and
- c. Shorelines that have few biophysical limitations to development such as floodplains, steep slopes, or landslide hazard areas.

3. **Management policies:** The following policies generally characterize the management goals of the Urban designation.

- a. Promote priority use on sites with physical access to the shoreline in the following order of preference:
 1. Water-dependent
 2. Water-related
 3. Water-enjoyment
- b. Allow the development of new non-water oriented uses on sites where the applicant can demonstrate that the use will not conflict with or limit opportunities for water-oriented uses or where there is no direct physical access to the shoreline.
- c. Ensure optimum use of shorelines that are either presently urbanized or planned for urbanization;
- d. Manage the shoreland environment for a variety of urban uses;
- e. Assure compatibility between upland and aquatic uses by requiring sensitive site design for the upland-aquatic interface;
- f. Provide visual and physical public access to shoreline areas;
- g. Encourage conservation and/or restoration projects, such as conserving, enhancing, or re-creating ecological functions in those opportunity areas referenced in the Inventory and Characterization (Appendix C) and Restoration Plan (Appendix D) documents.

4. Regulations

- a. Use Regulations:
 1. Permitted, Conditional and Prohibited uses are identified within Section 8 – Shoreline Use Matrix table. All shoreline development and use shall comply with Section 7 – General Regulations and Section 9 - Use Specific Regulations as applicable.

Permitted uses shall result in no net loss of shoreline ecological functions and shall not degrade other shoreline values.
 2. Prohibited Uses: Uses not identified as permitted or conditional are prohibited from being located within the Urban designation; unless the Director deems the use as substantially similar to a permitted, conditional, or accessory use. The Director shall consult with the Department of Ecology prior to issuing formal written

interpretations consistent with the purpose and intent of RCW90.58 and the applicable guidelines.

b. Bulk and Dimensional Regulations

Maximum Height:	30 feet or 2 stories, whichever is less
Minimum Shoreline Setback as measured landward from the Ordinary High Water Mark)*:	50 feet (Water Dependent Uses, including public access – 0 feet)
Maximum Impervious Surface:	45 percent

* unless the presence of critical areas would require a more restrictive shoreline setback.

I. Levee

1. **Purpose:** The purpose of the Levee designation is to ensure the continued existence of the levee structure along the Puyallup River for its important flood management principles and to allow for a mixture of residential, commercial, and industrial uses.

The majority of the parcels within the Levee shoreline designation are separated from direct access to the Puyallup River by the Levee. This positioning within the landscape precludes these parcels from having water dependent uses within this designation. As such, the City uses this Program to promote water enjoyment uses where feasible, but also allows for non-water related uses within it shoreline designations to provide for development as required within the Growth Management Act.

2. **Designation Criteria:** The Levee designation is applied to those shorelines along the Puyallup River as identified on the Fife Shoreline Master Program Designations Map.
3. **Management Policies:** The following policies generally characterize the management goals of the Levee designation.
 - a. Seek to maintain existing visual and physical access to the shoreline. Encourage new development to accommodate pedestrian shoreline access except where deemed inappropriate due to safety hazards, inherent security problems, environmental impacts, or conflicts with adjacent uses.
 - b. Promote public access and aesthetic objectives through means such as sign control, appropriate development siting, screening and maintenance of natural vegetative buffers.
 - c. Provide priority use on shoreline sites with physical access to the shoreline in the following order of preference:

1. Water-dependent
 2. Water-related
 3. Water-enjoyment
- d. Ensure that the levee is protected and maintained;
 - e. Minimize the potential for downstream properties to be flooded;
 - f. Allow a mix of residential, commercial, and industrial uses;
 - g. Ensure that uses and activities permitted in the Levee designation are compatible;
 - h. Prevent degradation of existing ecological functions; and
 - i. Encourage conservation and/or restoration projects, such as conserving, enhancing, or re-creating ecological functions in those opportunity areas referenced in the Inventory and Characterization (Appendix C) and Restoration Plan (Appendix D) documents.

4. Regulations

- a. Use Regulations
 1. Permitted Uses: Permitted, Conditional and Prohibited uses are identified within the Section 8 - Shoreline Use Matrix. All shoreline development and use shall comply with Section 7 – General Regulations and Section 9 – Use Specific Regulations, as applicable.

Permitted uses shall result in no net loss of shoreline ecological functions and shall not degrade other shoreline values.
 2. Prohibited Uses: Uses not identified as permitted or conditional are prohibited from being located within the Levee designation; unless the Director deems the use as substantially similar to a permitted, conditional, or accessory use. The Director shall consult with the Department of Ecology prior to issuing formal written interpretations consistent with the purpose and intent of RCW 90.58 and the applicable guidelines.

b. Bulk and Dimensional Regulations:

Maximum Height:	30 feet or 2 stories, whichever is less
Minimum Shoreline Setback as measured landward from the Ordinary High Water Mark)*:	100 feet (Water Dependent uses, including public access – 0 feet)
Maximum Impervious Surface:	45 percent

* unless the presence of critical areas would require a more restrictive shoreline setback.

J. Aquatic

1. **Purpose:** The purpose of the Aquatic designation is to manage, maintain, protect and enhance the characteristics of the areas waterward of the ordinary high-water mark of Hylebos Creek.
2. **Designation Criteria:** The Aquatic Designation is applied to shoreline areas within the City of Fife Jurisdiction that lie waterward of the ordinary high-water mark (OHWM) of Hylebos Creek. The shoreline area waterward of the OHWM for the Puyallup River is under the jurisdiction of the Puyallup Tribe of Indians.
3. **Management Policies:** The following policies generally characterize the management goals of the Aquatic designation.
 - a. Ensure that uses and activities permitted in areas adjacent to the Aquatic designation are compatible and will not detrimentally impact aquatic areas.
 - b. Prohibit uses that result in a net loss to the shoreline’s ecological functions or values.
 - c. Require projects to minimize shading impacts to aquatic resources.
 - d. Limit the size of overwater structures to the minimum necessary to support the structure’s intended use.
 - e. Encourage the multiple-use of over water facilities, if feasible.
 - f. Encourage conservation and/or restoration projects, such as conserving, enhancing, or re-creating ecological functions in those opportunity areas referenced in the Inventory and Characterization (Appendix C) and Restoration Plan (Appendix D) documents.
4. **Regulations**
 - a. Use Regulations

1. Permitted, Conditional and Prohibited uses are identified within Section 8 - Shoreline Use Matrix. All development and uses shall comply with Section 7 – General Regulations and Section 9 – Specific Use Regulations as applicable.
 - a. Permitted overwater structures, developments and uses shall be required to mitigate for impacts to shoreline function to ensure no-net-loss.
 - b. New over water structures are allowed only for water dependent uses, public access or ecological restoration.
 - c. The size of overwater structures shall be limited to the minimum size necessary to support the structure’s intended use.
 - d. Permitted overwater structures, developments, and uses shall minimize to the greatest extent possible, impacts to existing navigation.
 - e. Permitted overwater structures, developments, and uses shall provide unobstructed passage for fish and wildlife, particularly those species dependent upon migration.
 - f. Permitted overwater structures, developments and uses shall prevent water quality degradation and alteration to natural hydrographic conditions.
2. Prohibited Uses
 - a. Non-water dependent, over-water structures, excluding utilities.
 - b. Uses not identified as permitted, conditional, or accessory are prohibited from locating within the Aquatic designation unless the use is deemed by the Director as substantially similar to a permitted, conditional, or accessory use. The Director shall consult with the Department of Ecology prior to issuing formal written interpretations consistent with the purpose and intent of RCW90.58 and the applicable guidelines.

b. Bulk and Dimensional Regulations:

Maximum Height:	16 feet
-----------------	---------

K. Summary Bulk and Dimensional Regulations Table

	Conservancy	Shoreline Residential	Urban	Levee
Maximum Height:	30 feet or 2 stories, whichever is less			
Minimum Shoreline Setback as measured landward from the Ordinary High Water Mark):	100 feet ¹	50 feet ¹	50 feet ¹	100 feet ¹
Maximum Impervious Surface:	25 percent	30 percent	45 percent	45 percent

¹For water dependent uses, the minimum shoreline setback is 0 feet.

7. GENERAL REGULATIONS

The provisions of this Section apply to all shoreline designations.

A. Archaeological, Historic, and Cultural Research activities

1. Purpose

Due to the limited and irreplaceable nature of archaeological, historic, and cultural resources within the shoreline, the purpose of this section is to prevent the destruction of or damage to sites containing these resources. Historical and cultural and research activities include the creation of sites, structures and/or facilities for the purpose of studying historical and cultural aspects.

2. Policies

- a. Preserve, where possible, archaeological, historic and cultural for study and public observation.
- b. Work with adjacent jurisdictions, such as the Puyallup Tribe, to preserve and protect historically significant areas or areas known to contain archaeological data.
- c. Prevent public or private developments from destroying recognizable sites having scientific, historic, or cultural value.

3. Regulations

- a. If any archeological artifacts are uncovered during excavation within the shoreline jurisdiction, work must stop and the City of Fife, the Department of Archeology and Historic Preservation and the Puyallup tribe of Indians must be notified.
- b. Permits issued in areas with documented archeological resources shall require a site inspection or evaluation by a professional archaeologist in coordination with affected Indian tribes.

B. Critical Areas

Critical areas located within the City's shorelines jurisdiction shall be protected pursuant to Appendix B of this document. The majority of Appendix B is based directly upon Fife Municipal Code Title 17 (Ordinance Number 1111 § 9, 1992 and as amended by Ordinance Number 1566-05 § 11, 2005). The following portions of FMC 17 are not included in Appendix B in order to maintain consistency with SMA, RCW 90.58, requirements: Exemptions (FMC 17.05.050), Reasonable Use Exception (FMC 17.05.070), Variance (FMC 17.05.110),

Enforcement (FMC 17.05.130) and Non Conforming Activities (FMC17.05.150), Traffic Congestion, Streets, Limitations on Development (FMC 17.08) and Commute Trip Reduction (FMC 17.19) and SEPA Guidelines (FMC17.04). In addition, the wetland regulations found in FMC Title 17 have been modified for Appendix B for this SMP to maintain consistency with SMA requirements.

C. Flood Hazard Reduction

1. Purpose

To reduce flood damage or hazards to shoreline uses and developments as well as limit shoreline modifications that may increase flood hazards.

2. Policies

- a. Ensure that new development in areas prone to periodic flooding complies with the Flood Damage Prevention standards, Fife Municipal Code Title 15.40, in an effort to minimize health hazards and property damage due to flooding.
- b. Develop, enhance, and implement education programs aimed at mitigating natural hazards, and reducing the risk to citizens, public agencies, private property owners, businesses and schools.
- c. Encourage development of acquisition and management strategies to preserve open space for flood mitigation, fish habitat, and water quality in frequently flooded areas.
- d. Assure that flood hazard protection measures result in no net loss of ecological functions.

3. Regulations

- a. All shoreline development shall comply with Fife Municipal Code, Title 15.40 Flood Damage Prevention.
- b. Removal of gravel for flood control shall be consistent with 7(G)2(c)2.

D. Public Access

1. Purpose

Public Access is the ability of the public to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and to view the water and the shoreline from adjacent locations. See also WAC 173-26-221(4).

2. Policies

- a. Prevent public access from resulting in adverse impacts to shoreline process and functions.
- b. Ensure public access facilities are designed to provide for public safety including the provision of ADA accessible parking and sanitation facilities where appropriate.
- c. Require the incorporation of physical or visual access to the shorelines for projects which generate a demand for one or more forms of access or would impair existing legal access opportunities or rights.
- d. Mitigate for public access improvements, when necessary, to avoid a net loss of shoreline ecological processes and functions.
- e. Ensure public access requirements are consistent with all relevant constitutional and other legal limitations on regulation of private property.
- f. Require public access to be designed to minimize potential impacts to private property and individual privacy. Physical separation or other means should clearly delineate public and private space in order to avoid user conflict.
- g. Enhance and preserve views from public shoreline upland areas, as appropriate.
- h. Prevent development, uses and activities on or near the shoreline from unreasonably impairing or detracting from the public's legal access to the water.
- i. Ensure that public access area and facility requirements are commensurate with the scale and character of the development.
- j. Ensure that shoreline development by public entities such as local governments, port districts, state agencies and public utility districts provide public access unless such access is shown to be

incompatible due to reasons of safety, security or impact to the shoreline.

- k. Identify, map, and maintain public access to the shoreline afforded by existing shoreline street ends and rights-of-way and maintained as public access.
- l. Allow the clearing, thinning and/or limbing of vegetation in the shoreline only where it does not adversely impact ecological and aesthetic values or slope stability. Enhancement of views does not justify excessive removal of vegetation.
- m. Consider public use and access to the water a priority in recreational development.
- n. Encourage private property owners concerned with the protection of views to obtain view easements, purchase intervening property or seek other means of minimizing view obstruction. Private views of the shoreline, although considered during the shoreline permit review process, are not expressly protected.
- o. Encourage public access to connect public areas, undeveloped right-of-way, and other pedestrian or public thoroughfares. In addition, hiking paths, bicycle paths, easements and scenic drives should link shoreline parks, recreation areas and public access points.
- p. Consider providing incentives such as density or bulk and dimensional bonuses if development proposals include additional public access beyond that required by this SMP.

3. Regulations

- a. Public access improvements shall be constructed and maintained in a manner that does not result in a net loss of shoreline ecological functions.
- b. Except as provided in subsection e and f, below, shoreline substantial developments or conditional uses shall provide public access where any of the following conditions are present:
 - 1. A development or use will create increased demand for public access to the shoreline.
 - 2. A development or use will interfere with an existing public access way. Such interference may be caused by blocking access or by discouraging use of existing on-site or nearby accesses.

3. New non-water-dependent uses are proposed.
 4. A use or activity will interfere with public use of lands or waters subject to the public trust doctrine.
- c. Shoreline development by public entities, port districts, state agencies, and public utility districts shall include public access measures as part of each shoreline development.
 - d. Public access shall not be required for single-family residential development of four (4) or fewer lots. (Note: Local governments that conduct a comprehensive public planning process for public access may determine that public access should be required for small subdivisions.)
 - e. Public access shall not be required where one or more of the following conditions apply.
 1. Unavoidable health or safety hazards to the public exist which cannot be prevented by any practical means.
 2. Constitutional or other legal limitations may apply.
 3. Inherent security requirements of the use cannot be satisfied through the application of alternative design features or other solutions.
 4. The cost of providing the access, easement or an alternative amenity is unreasonably disproportionate to the total long-term cost of the proposed development.
 5. Adverse impacts to shoreline ecological processes and functions that cannot be mitigated will result from the public access.
 6. Significant unavoidable conflict between any access provisions and the proposed use and adjacent uses would occur and cannot be mitigated.
 - f. To meet any of the conditions in 3.e above, the applicant must first demonstrate and the City must determine in its findings that all reasonable alternatives to provide public access have been exhausted, including but not limited to:
 1. Regulating access by such means as maintaining a gate and/or limiting hours of use.

2. Separating uses and activities (e.g. fences, terracing, use of one-way glazings, hedges, landscaping, etc.).
 3. Developing access at a site geographically separated from the proposal such as a street end, vista or trail system.
 4. Sharing the cost of providing and maintaining public access between public and private entities.
- g. When provisions for public access are required as a condition of project approval, the Director shall prepare written findings demonstrating consistency with constitutional and legal practices regarding private property and the principles of nexus and proportionality.
 - h. Public access provided by existing shoreline street ends and public rights-of-way shall be preserved, maintained and enhanced consistent with RCW 35.79.035 and RCW 36.87.130.
 - i. Required public access sites shall be fully developed and available for public use at the time of occupancy of the shoreline development.
 - j. Public access shall consist of a dedication of land or a physical improvement in the form of a walkway, trail, bikeway, corridor, viewpoint, park, deck, observation tower, boat launching ramp, or other area serving as a means of view and/or physical approach to public waters. It may include interpretive centers and displays.
 - k. Public access provisions shall run with the land and be recorded via a legal instrument such as an easement, or as a dedication on the face of a plat or short plat. Such legal instruments shall be recorded with the County Auditor's Office prior to the time of building permit approval, occupancy or plat approval, whichever comes first (RCW 58.17.110). Future actions by the applicant's successors in interest or other parties shall not diminish the usefulness or value of required public access areas and associated improvements.
 - l. Maintenance of the public access facility over the life of the use or development shall be the responsibility of the owner unless otherwise accepted by a public or non-profit agency through a formal agreement recorded with the County Auditor's Office.
 - m. Minimum width of public access easements shall be at least 12 feet, unless the Director determines that undue hardship to the proponent would result. In such cases, easement width may be reduced only to the minimum extent necessary to relieve the

hardship.

- n. Public access sites shall be made barrier-free for the physically disabled where feasible, and in accordance with the Americans with Disabilities Act (ADA).
- o. The standard state approved logo or other locally approved signs that indicate the public's right of access and hours of access shall be constructed, installed and maintained by the applicant or owner in conspicuous locations at public access sites.
- p. Public access shall incorporate the following location and design criteria:
 - 1. A public pedestrian access walkway is required where open space is provided along the shoreline, and public access can be provided in a manner that will not adversely impact shoreline ecological processes and functions. The walkway shall be buffered from sensitive ecological features and provide limited and controlled access to the water's edge where appropriate. Fencing may be used to control damage to plants and other sensitive ecological features. Trails shall be constructed of permeable materials and limited to 5 feet in width to reduce impacts to ecologically sensitive resources.
 - 2. Public access shall be located adjacent to other public areas, access points and connecting trails and connected to the nearest public street.
 - 3. Where views of the water or shoreline are available and physical access to the water's edge is not present or appropriate, a public viewing area shall be provided.
 - 4. Intrusions on privacy shall be minimized by avoiding locations adjacent to windows and outdoor private open spaces or by screening or other separation techniques.
- q. Public access design shall provide for the safety of users to the extent feasible. Appropriate amenities such as benches, picnic tables and public parking sufficient to serve the users shall be provided.

- r. Public restrooms, facilities for disposal of animal waste and other appropriate public facilities shall be required at developments that attract a substantial number of persons.
- s. New development shall be located and designed to avoid or minimize adverse impacts to views from public property.

E. Shoreline Vegetation Conservation

1. Purpose

The intent of vegetation conservation is to protect and restore the ecological functions and ecosystem-wide processes performed by vegetation along the shoreline. Vegetation conservation provisions include the prevention or restriction of plant clearing and earth grading, vegetation restoration, and the control of invasive weeds and non-native species.

2. Policies

- a. Prohibit speculative clearing, grading, or vegetation removal within the required shoreline setback.
- b. Limit alteration of the natural landscape within the shoreline setback to the minimum necessary to accommodate the shoreline development or to remove invasive vegetation.
- c. Restrict clearing and grading within shoreline setback in order to maintain shoreline functions.
- d. Permit clearing activities associated with levee maintenance as necessary to provide protection from flood hazards.

3. Regulations

- a. Speculative clearing, grading, or vegetation removal within the required shoreline setback is prohibited.
- b. During construction, shoreline vegetation shall be protected by placement of a temporary barricade at the location of the shoreline setback and implementation of appropriate erosion and sedimentation controls.

- c. Invasive species within the shoreline setback may be removed by hand, including the use of hand tools. Cleared areas shall be replanted with native vegetation to prevent erosion.
- d. Selective pruning of tree limbs for view protection is allowed but shall not be conducted in such a manner as to result in the death of the tree.
- e. The removal of hazardous trees is allowed with an arborist's report. Tree removal within the shoreline jurisdiction shall also comply with FMC 19.64.140 Retention and Protection of Significant trees and groves of trees.

F. Water quality, storm water and nonpoint source pollution

1. Purpose

Prevent impacts to water quality and stormwater quality that would result in a loss of ecological functions, or a significant impact to aesthetic qualities, or recreational opportunities.

2. Policy

Protect the City of Fife's shoreline areas by ensuring that surface water quality and quantity regulations are administered in shoreline areas.

3. Regulations

- a. All shoreline development shall comply with Fife Municipal Code, regulations related to water quality, including but not limited to Title 13, Title 15, and Title 21.

G. Shoreline Modifications

1. Clearing and Grading

a. Purpose

Prevent impacts to shoreline functions and processes that may occur as a result of clearing and grading within the shoreline jurisdiction. Clearing and grading includes the activities associated with developing any kind of residential, agricultural, commercial, or industrial project. Clearing involves the removal of vegetation and /or topsoil, while grading means the movement or redistribution of the soil, sand, rock, gravel, sediment, or other material on a site in a manner that alters the natural contour of the land.

b. Policies

1. Permit clearing and grading should only in concert with permitted shoreline development.
2. Require clearing and grading activities to be minimized to the extent necessary to accommodate the scope of work within the shoreline.
3. Require that best management practices should be utilized during clearing and grading activity consistent with the City's surface water management manual and this SMP.

c. Regulations

1. Clearing and grading shall be minimized and areas cleared of vegetation and not developed shall be replanted as soon as possible.
2. The clearing of large woody debris shall be avoided whenever practical because of the value that such debris has in providing for biological diversity and shoreline stabilization.
3. Clearing and grading activities associated with the necessary maintenance of the levee for the purposes of maintaining flood protection are permitted.
4. Normal maintenance, if found to be in compliance with Chapter 7(E) of this document, including pruning and trimming of vegetation, shall be permitted within the shoreline. Topping of trees for view purposes only shall not be permitted.
5. Clearing of invasive non-native shoreline vegetation as identified by the State of Washington and/or Pierce County as a noxious weed is permitted in the shoreline jurisdiction. Removal of invasive non-native shoreline vegetation is permitted provided that only hand-held equipment is used and native vegetation is promptly reestablished in the disturbed area.
6. Surface water runoff related to clearing and grading associated with shoreline development shall be minimized to the greatest extent and shall be in compliance with the City of Fife Stormwater Management Program and all applicable regulations.

2. Dredging and Dredge Material Disposal

a. **Purpose**

Prevent impacts to shoreline functions and processes that may occur as a result of dredging and the disposal of dredge material within the shoreline jurisdiction. Dredging is described as the scooping or suction activity to remove materials from the bottom of waterways for the purpose of deepening the waterbody or harbor.

b. **Policies**

1. Require dredging and dredging material disposal to avoid significant ecological impacts.
2. Prevent dredging waterward of the ordinary high-water mark for the primary purpose of obtaining fill material, except when the material is necessary for the restoration of ecological functions.
3. Permit dredging as part of ecological restoration or enhancement, beach nourishment, public access, or flood storage, if deemed consistent with this program.

c. **Regulations**

1. Dredging and dredge material disposal shall be done in a manner which avoids or minimizes significant ecological impacts. Impacts which cannot be avoided should be mitigated in a manner that assures no net loss of shoreline ecological functions.
2. Dredging for flood control shall be allowed only if biological and geomorphological study demonstrates a long-term benefit to flood hazard reduction, no net loss of ecological function, and is part of a comprehensive flood management solution.
3. New development siting and design shall avoid the need for new and maintenance dredging.
4. Dredging for fill materials shall be prohibited with the exception of projects associated with MTCA or CERCLA habitat restoration, or any other significant restoration effort approved by a Shoreline Conditional Use Permit.
5. Dredging to establish new navigational channels is prohibited.

6. Dredge disposal materials shall be disposed either on land away from the shoreline or in open waters, unless such materials are needed for habitat improvement. Open water disposal shall only be approved when authorized by the applicable local, state, and federal agencies.

3. Fill

a. Purpose

Prevent impacts to shoreline functions and processes that may occur as a result of fill within the shoreline jurisdiction. Fill is the addition of soil, sand, rock, gravel, sediment, earth retaining structure, or other material to and area waterward of the OHWM, in wetlands, or on shorelands in a manner that raises the elevation or creates dry land.

b. Policies

1. Require the minimization of the use of fill for any proposal.
2. Ensure that the placement of fill does not result in a loss of flood storage.

c. Regulations

1. The following submittal information shall be required for fill projects:
 - a. Proposed use of the fill area;
 - b. Physical, chemical, and biological characteristics of the fill material;
 - c. Source of the fill material, fill material must come from a clean source;
 - d. Method of placement and compaction;
 - e. Location of the fill relating to natural or existing drainage patterns;
 - f. Location of the perimeter of the fill relating to the ordinary high water mark, or any wetland;
 - g. Perimeter erosion control or stabilization means, and schedule for implementation; and
 - h. Type of surfacing and run-off control and treatment

devices.

2. Fill shall be permitted only where it is demonstrated that it will not result in the following:
 - a. Net loss to water quality, fish, shellfish, and/or wildlife habitats;
 - b. Adverse alteration to natural drainage and circulation patterns, currents, rivers, or significant reduction of flood water capacities; and
 - c. Adverse interference of geological processes along the shoreline.
3. Fill waterward of the OHWM for water dependent use, public access, cleanup and disposal of contaminated sediments as part of an interagency environmental clean – up plan, disposal of dredged material in accordance with the Department of Natural Resources Dredged Material Management Program, or the expansion or alteration of transportation facilities of statewide significance currently located on the shoreline (if alternatives to fill are shown to be not feasible) shall be reviewed through the Conditional Use Permit process.
4. Fill waterward of the OHWM for mitigation action, environmental restoration, or enhancement project shall be reviewed as a permitted use pursuant to WAC 173-26-231 (3)(c), or as amended.
5. Where fill is permitted, the fill shall be the minimum necessary to accomplish the proposed use.
6. The placement of fill shall be timed to minimize damage to water quality and aquatic life.
7. To prevent loss of flood storage, compensatory storage shall be provided commensurate with the amount of fill placed in the floodway.
8. Fill areas must be designed to prevent erosion and material movement from the filled area. Erosion control techniques shall be utilized including silt curtains, retaining walls and vegetation.
9. Speculative fill is prohibited. Fill, water-ward of the ordinary high water mark and/or upland is only allowed in

conjunction with a permitted use.

4. **Shoreline Stabilization**

a. **Purpose**

The purpose of these shoreline stabilization general regulations is to prevent impacts to shoreline functions and processes that may occur as a result of shoreline modification within the shoreline jurisdiction. This section shall be used for both structural and non-structural shoreline stabilization measures, including revetments and rip-rap used to minimize erosion and/or residential flooding, as well as new stabilization measures including enlargements to existing stabilization structures. Structural modifications associated with the levee along the Puyallup River shall be reviewed under Section 7 (H) Structural Flood Hazard Reduction Measures (Dikes and Levees).

b. **Policies**

1. Require shoreline modification requests to include information on the impacts that such modifications would have on the likely migration of the stream channel.
2. Show preference for non-structural-bank shoreline modifications over structural treatments.
3. Encourage projects within the Hylebos Creek channel migration zone where the primary purpose of the project is protecting or restoring ecological functions and ecosystem-wide processes.
4. Require new development to be located and designed to avoid the need for future shoreline modification to the extent feasible.
5. Prohibit new development that would require shoreline modification which causes significant impacts to adjacent or down-current properties and shoreline areas.
6. Prohibit hard armoring solutions where it is demonstrated that an existing structure will be damaged within three years as a result of shoreline erosion in the absence of such hard armoring measures, or where waiting would foreclose the opportunity to use measures that avoid impacts on ecological functions.

c. **Regulations**

1. Structural shoreline modifications are permitted only through the granting of a Conditional Use Permit.
2. The granting of the Conditional Use Permit shall only occur where the applicant has demonstrated that the structural shoreline modification is necessary to support or protect an allowed primary structure or a legally existing shoreline use that is in danger of loss or substantial damage or are necessary for mitigation or enhancement and that a non-structural shoreline modification or an increase in the setback of the primary structure cannot achieve the same objective.
3. Shoreline modifications shall be designed to ensure no net loss of ecological functions and values. In reviewing requests for shoreline modifications, the City shall review modification requests consistent with the specific shoreline segment and environmental conditions of the site. Mitigation measures may be required to address no net loss of ecological function.
4. New structural stabilization and/or modification measures are prohibited unless necessity is demonstrated in the following manner:
 - a. To protect existing primary structures:
 - i. New or enlarged structural shoreline stabilization measures for an existing primary structure, including single-family residences, should not be allowed unless there is conclusive geotechnical evidence that the structure is in danger from shoreline erosion. The geotechnical analysis should evaluate on-site drainage issues and address drainage problems away from the shoreline edge before considering structural shoreline stabilization and/or modification.
 - ii. The erosion control structure will not result in a net loss of shoreline ecological functions.
 - b. In support of new non-water-dependent development, including single-family residences, when all of the conditions below apply:

- i. The erosion is not being caused by upland conditions, such as the loss of vegetation and drainage.
 - ii. Nonstructural measures, such as placing the development further from the shoreline, planting vegetation, or installing on-site drainage improvements, are not feasible or not sufficient.
 - iii. The need to protect primary structures from damage due to erosion is demonstrated through a geotechnical report, as described in Section 7 – General Regulations, (G)(4)(c)(5). The damage must be caused by natural processes.
 - iv. The erosion control structure will not result in a net loss of shoreline ecological functions.
 - c. In support of water-dependent development when all of the conditions below apply:
 - i. The erosion is not being caused by upland conditions, such as the loss of vegetation and drainage.
 - ii. Nonstructural measures, planting vegetation, or installing on-site drainage improvements, are not feasible or not sufficient.
 - iii. The need to protect primary structures from damage due to erosion is demonstrated through a geotechnical report.
 - iv. The erosion control structure will not result in a net loss of shoreline ecological functions.

5. Geotechnical reports required pursuant to this section shall be prepared by a geologist or geotechnical engineer licensed as a civil engineer in the state of Washington. The geotechnical report shall include at a minimum the following:

- a. A scaled site plan showing:
 - i. The location of existing and proposed shore stabilization, structures, fill;

- ii. Vegetation, with dimensions indicating distances to the OHWM; and
 - iii. Existing site topography, preferably with 2 foot contours.
 - b. A description of the processes affecting the site, and surrounding areas that influence or could be influenced by the site, including areas in which creek or river geomorphic processes affect the site, including, but not limited to:
 - i. Soil erosion, deposition, or accretion;
 - ii. Evidence of past or potential channel migration; and
 - iii. An estimate of shoreline erosion rates.
 - c. Geotechnical reports generated to identify the need to prevent potential damage to an existing primary structure shall address the necessity for shoreline stabilization by estimating time frames and rates of erosion and report on the urgency associated with the specific situation. The report shall also determine whether damage to the primary structure will occur within three years as well as explore alternative shoreline stabilization methods.
- 6. An existing shoreline stabilization structure may be replaced with a similar structure if there is a demonstrated need to protect principal uses or structures from erosion caused by natural conditions.
 - a. The replacement structure should be designed, located, sized, and constructed to assure no net loss of ecological functions.
 - b. Replacement walls or bulkheads shall not encroach waterward of the ordinary high-water mark or existing structure unless the residence was occupied prior to January 1, 1992, and there are overriding safety issues or environmental concerns. In such cases, the replacement structure shall abut the existing shoreline stabilization structure.
 - c. Soft shoreline stabilization measures that provide restoration of shoreline ecological functions may be

permitted waterward of the ordinary high-water mark.

- d. For purposes of this section standards on shoreline stabilization measures, "replacement" means the construction of a new structure to perform a shoreline stabilization function of an existing structure which can no longer adequately serve its purpose. Additions to or increases in size of existing shoreline stabilization measures shall be considered new structures.
7. When any structural shoreline stabilization measures are demonstrated to be necessary based on the regulations above, the following design criteria shall apply:
- a. The size of stabilization measures shall be limited to the minimum necessary.
 - b. Soft approaches shall be used unless demonstrated not to be sufficient to protect primary structures, dwellings, and businesses.
 - c. Public access to shoreline areas shall not be impaired with publicly funded projects except where such access is determined to be infeasible because of incompatible uses, safety, security, or harm to ecological functions.
 - d. Hydraulic analysis shall be provided to demonstrate that the stabilization strategy allows sediment conveyance to mimic natural conditions.

H. Structural Flood Hazard Reduction Measures (Dikes, Levees, Weirs)

1. Purpose

The purpose of structural flood hazard reduction measures are to provide structural stabilization to the shoreline, such as levees or dikes, specifically utilized to address flooding within and adjacent to the Levee shoreline designation within the City of Fife.

2. Policies

- a. The City intends to manage flood protection through Comprehensive Planning, stormwater and flood hazard regulations.
- b. Assure that flood hazard reduction measures result in no net loss of

ecological functions.

- c. Require new development to be located and designed to avoid the need for future structural flood hazard reduction measures to the extent feasible.
- d. Where possible, the City intends to integrate public access into publically financed flood control and management facilities.

3. Regulations

- a. Normal maintenance and repair of existing flood hazard reduction structures shall be allowed pursuant to WAC 173-27-040 (2)(b).
- b. Structural flood hazard reduction measures waterward of the Ordinary High Water Mark are only allowed for water-dependent uses, public access, flood protection or other specific public purpose.
- c. Structural flood hazard reduction measures are permitted only through the granting of a Conditional Use Permit.
- d. Modification of existing structural flood hazard measures shall be allowed where it can be demonstrated by engineering analysis that the existing structure does not provide an adequate level of protection for the surrounding lands or that the existing structure does not meet appropriate engineering design standards for stability.
- e. Flood hazard protection and/or reduction structures shall be shaped and planted with vegetation suitable for wildlife habitat, where feasible.
- f. Flood hazard protection and/or reduction structures shall be designed to ensure no net loss of ecological functions and values. In reviewing requests for shoreline modifications, the City shall review modification requests consistent with the specific shoreline segment and environmental conditions of the site.
- g. Public access measures shall be included as a part of publicly funded structural flood hazard reduction measure project except where such access is determined to be infeasible because of incompatible uses, safety, security, or harm to ecological functions.

- h. New structural flood hazard measures shall only be allowed when the structure has been demonstrated to be necessary, non-structural methods are infeasible, and mitigation is accomplished.
- i. New structural flood hazard measures shall be placed landward of associated wetlands and buffer areas except where no alternative exists as documented by geotechnical analysis. The geotechnical analysis shall be prepared by a geologist or geotechnical engineer licensed as a civil engineer in the state of Washington and shall include the following:
 - a. A scaled site plan showing:
 - i. The location of any existing and proposed structural flood hazard measures including any proposed fill; and
 - ii. Vegetation, with dimensions indicating distances to the OHWM; and
 - iii. Existing site topography, preferably with 2-foot contours; and
 - iv. A description of the processes affecting the site, and surrounding areas that influence or could be influenced by the proposed structural flood hazard prevention measure, including areas in which creek or river geomorphic processes affect the site.
- j. Hydraulic analysis shall be provided to demonstrate that the structural flood hazard reduction measure allows sediment conveyance to mimic natural conditions.
- k. Shoreline modification requests for the purposes of flood hazard protection and/or reduction measures shall include information on the impacts that such modifications would have on the likely migration of the stream channel.

I. Environmental Impact Mitigation

1. Purpose

Assure no net loss of shoreline ecological functions by requiring mitigation for impacts to shoreline functions. These provisions apply throughout the City of Fife's shoreline jurisdiction.

2. Policy

Avoid or mitigate impacts to the City of Fife's shoreline areas to ensure the standards of no net loss to shoreline function are met.

3. Regulations

- a. New development proposals shall analyze environmental impacts of the proposal and include measures to mitigate environmental impacts not otherwise avoided or mitigated by compliance with the master program and other applicable regulations. Analysis shall occur through the rubric of the State Environmental Policy Act of 1971 (SEPA), as amended.
- b. Mitigation measures shall be applied in the following sequence of steps listed in order of priority:
 1. Avoiding the impact altogether by not taking a certain action or parts of an action;
 2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation by using appropriate technology or by taking affirmative steps to avoid or reduce impacts;
 3. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
 4. Reducing or eliminating the impact over time by preservation and maintenance operations;
 5. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and
 6. Monitoring the impact and the compensation projects and taking appropriate corrective measures.
- c. In determining appropriate mitigation measures applicable to shoreline development, lower priority measures should be applied only where higher priority measures are determined to be

infeasible or inapplicable.

- d. Mitigation shall not be required that exceeds that necessary to assure the development will result in no net loss of shoreline ecological functions.
- e. When compensatory measures are appropriate pursuant to the mitigation priority sequence above, preferential consideration shall be given to measures that replace the impacted functions directly and in the immediate vicinity of the impact. However, alternative compensatory mitigation within the watershed that addresses limiting factors or identified critical needs for shoreline resource conservation based on watershed or comprehensive resource management plans applicable to the area of impact may be authorized. Authorization of compensatory mitigation measures may require appropriate safeguards, terms or conditions as necessary to ensure no net loss of ecological functions.
- f. Mitigation efforts shall be consistent with the City of Fife's Shoreline Restoration Plan (Appendix D), where applicable.

8. SHORELINE USE MATRIX²

Land Uses	Shoreline Designations				
	Conservancy	Shoreline Residential	Urban	Levee	Aquatic
Agriculture	P	P	X	P	X
Aquaculture	X	C	C	C	C
Boating Facilities	X	X	X	P	P

Shoreline Stabilization	C	C	C	C	C
Signs	P	P	P	P	X
Transportation Facilities and Parking ^c	C	P	P	P	C
Utilities ³	P	P	P	P	P
Archaeological, historic and cultural research activities	P	P	P	P	P
Structural Flood Hazard Reduction measures (Dikes, weirs, and levees) ^d	C	C	C	C	C
Unclassified Uses	C	C	C	C	C

² In the event of a conflict between the matrix and the regulatory text, the text shall hold.

³ Certain utilities are permitted as a conditional use see page 98, Section P(3)(h).

Footnotes for this table are provided on the following page

^a Only when part of an approved shoreline use or development, otherwise prohibited.

^b Fill that is conducted as part of an ecological restoration project is a permitted, as opposed to Conditional Use Permit, process.

^c Parking as a primary use within the shoreline jurisdiction is prohibited, refer to Transportation and Parking regulations, Section 9 (N).

^d Structures waterward of the Ordinary High Water Mark are only allowed for water-dependent uses, public access, flood protection or other specific public purpose.

P – Permitted, may require Shoreline Exemption Review or Shoreline Substantial Development Permit

C – Conditional Use

X – Prohibited

N/A – Not Applicable

9. USE-SPECIFIC REGULATIONS

The following section includes policies and regulations applicable to specific types of development to be proposed within the shoreline areas of Fife. A proposed project may be covered under multiple sections contained within the regulations.

A. Agricultural Activities

1. Definition

“Agricultural Activities” means agricultural uses and practices including, but not limited to: Producing, breeding, or increasing agricultural products; rotating and changing agricultural crops; allowing land used for agricultural activities to lie fallow in which it is plowed and tilled but left unseeded; allowing land used for agricultural activities to lie dormant as a result of adverse agricultural market conditions; allowing land used for agricultural activities to lie dormant because the land is enrolled in a local, state, or federal conservation program, or the land is subject to a conservation easement; conducting agricultural operations; maintaining, repairing, and replacing agricultural equipment; maintaining, repairing, and replacing agricultural facilities, provided that the replacement facility is no closer to the shoreline than the original facility; and maintaining agricultural lands under production or cultivation.

2. Policies

- a. Although existing agricultural activities occurring on agricultural lands shall not be affected by the adoption of the City of Fife SMP, the City strongly recommends, and will require to the extent possible, best management practices to be used in existing agricultural practices occurring within shorelines jurisdiction.
- b. Require new agricultural uses and the conversion of agricultural uses to non-agricultural uses to be consistent with the shoreline designation, and the general and specific use regulations applicable to the proposed use to prevent net loss of shoreline function and value.
- c. Establish shoreline setbacks on new agricultural development within shorelines jurisdiction.
- d. Encourage the use of appropriate farm management techniques to prevent contamination of the shoreline environment and adverse effects to associated plant, fish, and animals.

3. Regulations

- a. New agricultural uses and the conversion of agricultural uses to non-agricultural uses shall require consistency with the designation, and the general and specific use regulations applicable to the proposed use and do not result in a net loss of ecological functions associated with the shoreline function and value.
- b. The raising of livestock is not permitted within any of the shoreline designations within the City of Fife.
- c. New agricultural uses shall not be allowed if it is not a permitted or conditional use of the underlying zoning designation.
- d. Non-agricultural uses occurring on lands where the principle use is an agricultural use shall be consistent with the shoreline designation in which the land is located.
- e. New agricultural uses not exempted under RCW 90.58.030(3)(e)(iv) shall be subject to a Shoreline Substantial Development Permit.
- f. The establishment of setbacks, beyond those which are required within each shoreline designation, shall be based on scientific and technical information provided by the applicant to demonstrate how management practices will preserve the ecological functions and qualities of the shoreline environment.
- g. Agricultural activities within shorelines are also governed by Appendix B.
- h. The farming of fin fish, shellfish and management of other aquatic products shall be reviewed pursuant to the policies and regulations of Section 7 - General Regulations (B) Critical Areas of this Program.

B. Aquaculture

1. Definition

"Aquaculture" means the culture or farming of fish, shellfish, or other aquatic plants and animals.

Aquaculture may require development such as fish hatcheries, rearing pens, and structures, as well as use of natural spawning and rearing habitats/areas. This term may also include activities related to the growing, handling, or harvesting of aquatic produce such as propagation,

stocking, holding, nurturing, disease treatment, waste disposal, water use, creation of habitat and associated structures as well as similar activities.

2. Policies

- a. Identify aquaculture, as a water-dependent use and a preferred shoreline use.
- b. Require aquaculture activities to control pollution and avoid adverse impacts to shoreline habitat and function.
- c. Preference shall be given to aquaculture activities with the least amount of impact, e.g. activities that involve no structures shall be preferred to those that require structures and projects that require minimal shoreline modification are preferred to those that require substantial modification.
- d. Require aquaculture practices to be designed in such a manner as to support long-term beneficial use of the shoreline and result in no-net loss of shoreline habitat and function.
- e. Require aquaculture projects to address the rights of tribes to aquatic resources within their usual and accustomed areas. Direct coordination between the applicant or applicant's representative and the tribe is encouraged.

3. Regulation

- a. The applicant or applicant's representative shall demonstrate that impacts from the proposed aquaculture activity have been avoided to the greatest extent feasible. Impacts that cannot be avoided shall be minimized and then mitigated.
- b. Aquaculture activities that would have a significant impact to shoreline processes, functions, and/or habitat are prohibited.
- c. All aquaculture activities shall obtain all necessary local, state and federal permits and approvals prior to commencing operation.
- d. Waste related to aquaculture activities shall be disposed of in a manner that complies with all applicable waste disposal standards.
- e. Aquaculture shall not be permitted in the Conservancy designation or tangent aquatic designation.
- f. Aquaculture developments shall be screened from view from adjacent residential and recreational areas by fences, berms, and/or vegetative buffers.

- g. The operators of aquaculture developments shall control odor so as not to affect adjacent developments.

C. Boating Facilities

1. Definition

Boating facilities generally refer to structures providing the boating public recreational opportunities on the waters of the state including but not limited to marinas, public docks, buoys, etc. Boating facilities does not refer to docks that serve four or fewer single family residences. Due to the situation of the City within the landscape, the width and water flow of the Hylebos as well as the width of the Puyallup River preclude most boating facilities.

2. Policies

- a. Due to the situation of the City within the landscape, the width, depth and water flow rate of the Hylebos as well as the width of the Puyallup River preclude most boating facilities.
- b. Boating facilities should be located only at sites with suitable environmental conditions, shoreline configuration, access, and compatible adjacent uses.
- c. Boating facilities should not impact existing view access to the shoreline.
- d. There is not suitable shoreline to support live-aboard facilities within the City of Fife. Therefore, live-aboard boating facilities should be prohibited within the City of Fife's shorelines.
- e. Boating facilities that restrict navigation of the City of Fife shorelines should be prohibited.
- f. Boating facilities should be designed in such a manner as to result in no net loss of ecological function.

3. Regulations

- a. Aesthetic considerations, including view blockage and modifications to existing landscapes, shall be considered by the City of Fife when considering applications for boating facilities.
- b. New uses are prohibited which would restrict navigation of the City of Fife's shorelines.
- c. Live-aboard boating facilities are prohibited within the City of

Fife's shorelines.

- d. Public access shall be provided for all new boating facilities.
- e. Boating facilities shall be designed to assure that no net loss in ecological function and value occur.
- f. The Director shall consider health, safety, and welfare when reviewing an application for a boating facility site.
- g. Boating facilities shall be restricted to the minimum size necessary to serve the proposed water-dependent use.

D. Commercial Development

1. Definition

Commercial development means retail, wholesale, service, trade or other business activities.

2. Policies

- a. Give preference to water-oriented development within the shoreline jurisdiction.
- b. Permit non water-oriented commercial uses that comply with shoreline bulk, dimensional and setback requirements and do not result in net loss of ecological function.
- c. Encourage commercial developments to provide either a physical or visual connection to the shoreline, so that the maximum enjoyment can be gained.
- d. Require commercial development to be designed to complement the shoreline area's existing character.
- e. Require new commercial development to provide physical and visual access to shorelines to the extent that such access does not interfere with operations or hazards to life.
- f. Require commercial developments to include conceptual plans for amenities on the shoreline including landscaped areas and open space, as applicable

3. Regulations

- a. New over-water commercial development, that is not water-dependent, is prohibited.

- b. Where on-site public access is appropriate, commercial development shall dedicate, improve, and provide maintenance for a pedestrian easement that provides area sufficient to ensure usable access to and along the shoreline for the general public. Public access easements shall be a minimum of twelve feet in width.
- c. Advertising and signs associated with commercial uses shall comply with applicable policies and regulations of this Master Program.
- d. New or expanded structures shall not extend more than 30 feet in height above average grade level.
- e. Upland commercial or industrial structures shall be screened from view from adjacent residential or recreational areas by fences, berms, and/or vegetative buffers.
- f. New water-oriented commercial uses are permitted in instances where the project complies with shoreline bulk, dimensional and setback requirements and does not result in net loss of ecological function.
- g. Commercial developments shall provide either a physical or visual connection to the shoreline, where feasible, so that the maximum enjoyment can be gained.
- h. Commercial development shall be designed to complement the shoreline area's existing character.

E. Dune Modification

1. Definition

"Dune modification" is the removal or addition of material to a dune, the reforming or reconfiguration of a dune, or the removal or addition of vegetation that will alter the dune's shape or sediment migration

2. Policies

- a. The City of Fife does not contain dune habitat therefore Dune modification policies are not required as part of this shoreline master program update.

3. Regulations

- a. The City of Fife does not contain dune habitat therefore Dune modification policies are not required as part of this shoreline

master program update.

F. Forest Practices

1. **Definition:** “Forest Practices” means any activity conducted on or directly pertaining to forest land, and the growing, processing or harvesting of timber. These activities are generally reviewed by the Washington State Department of Natural Resources pursuant to RCW 76.09. For the purposes of this shoreline master program, this definition does not include activities such as tree marking and surveying.
2. **Policies**
 - a. The City of Fife does not contain any parcels within its shoreline jurisdiction that are utilized for Forest Practices. As such, forest practices should be prohibited within the City of Fife shoreline jurisdiction.
3. **Regulations**
 - a. Forest Practices are prohibited within the City of Fife.

G. Industry

1. Definition:

“Industry”/“Industrial use” means uses associated with the production, processing, manufacturing, storing or fabrication of goods and/or materials.

2. Policies

- a. Require new industrial development to provide physical and visual access to shorelines to the extent that such access does not interfere with operations or hazards to life.
- b. Prohibit industrial development from being located on sensitive and ecologically valuable shorelines.
- c. Encourage industrial uses and redevelopment to locate where environmental cleanup and restoration can be accomplished.

3. Regulations

- a. New non-water-oriented industrial uses are permitted in instances where no direct physical connection to the shoreline is present.
- b. Industrial uses shall have structural and mechanical spill prevention strategies approved by the Tacoma-Pierce County Department of Health.
- c. The location, design, and construction of industrial uses and redevelopment is required to assure no net loss of ecological functions.
- d. Where on-site public access is appropriate, industrial development shall dedicate, improve, and provide maintenance for a pedestrian easement that provides area sufficient to ensure usable access to and along the shoreline for the general public. Public access easements shall be a minimum of twelve feet in width.
- e. Outdoor storage and/or disposal of industrial wastes is prohibited within shoreline jurisdiction.
- f. Display and other exterior lighting shall be designed, shielded, and operated to minimize glare, to avoid illuminating nearby properties, and to prevent hazards for public traffic.
- g. Hazardous materials and chemicals shall be stored indoors.

- h. Industrial developments shall be screened from view from adjacent residential and recreational areas by fences, berms, and/or vegetative buffers.

H. In-stream Structural Uses

1. Definition

In-stream structure means a structure placed by humans within a stream or river waterward of the ordinary high-water mark that either causes or has the potential to cause water impoundment or the diversion, obstruction, or modification of water flow.

2. Policies

- a. Promote the location and planning of in-stream structures to emphasize the protection and restoration of priority habitats and species through special consideration to:
 - 1. Full range of public interests;
 - 2. Watershed functions and processes;
 - 3. Environmental concerns.
- b. Require or encourage, as appropriate, the planning and design of in-stream structures to be consistent with and incorporate elements from applicable watershed management plans, restoration plans (Appendix D), and surface and stormwater management plans.

3. Regulations

- a. New in-stream structures shall provide for the protection and preservation, of ecosystem-wide processes, ecological functions, and cultural resources – including fish and fish passage, wildlife and water resources, shoreline critical areas and hydrogeological processes.
- b. In-stream construction shall protect hydrologic connections between Hylebos Creek and Commencement Bay.
- c. No new in-stream structure shall be approved unless it is demonstrated that there will be no net loss in ecological function and value within Hylebos Creek.
- d. Professionally engineered designs will be required for all in-stream structures.

- e. No in-stream structure may be installed without having first obtained all applicable local, state, and federal approvals.

I. Marinas, Piers, and Docks

1. Definitions

- a. “Marina” means a specially designed harbor with moorings for pleasure craft and small boats.
- b. “Pier” means a platform extending from a shore over water and supported by piles or pillars, used to secure, protect, and provide access to ships or boats.
- c. “Dock” means a floating platform serving four or fewer single family residences which abuts the shoreline, extending waterward from ordinary high water, or from the bottom of a ramp extending from a pier, generally used as a landing or moorage place for watercraft.

2. Policy

- a. Neither the shoreline jurisdiction of the Puyallup River nor Hylebos Creek within the City of Fife contain adequate water depth or width to support marinas, piers, and/or docks. As such, marinas, piers and docks are prohibited in the City of Fife.

3. Regulation

- a. Neither shoreline jurisdiction of the Puyallup River nor Hylebos Creek within the City of Fife contain adequate water depth or width to support marinas, piers, and/or docks. As such, marinas, piers and docks are prohibited in the City of Fife.

J. Mining

1. Definition

“Mining” means the removal of naturally occurring materials from the earth for economic uses pursuant to RCW78.44 and WAC 332-18.

2. Policy

- a. In order to protect existing shoreline processes and functions, mining is prohibited within the City of Fife Shoreline jurisdiction.

3. Regulation

- a. Mining is prohibited within the City of Fife Shoreline jurisdiction.

K. Recreational Development

1. Definitions

“Recreation” means refreshment of body and mind through forms of play, sports, relaxation, amusement or contemplation.

“Recreational development” provides opportunities for play, sports, relaxation, amusement, or contemplation including both passive and active uses within both public and commercial developments.

“Recreational development, active” means activities that generally require the use of constructed facilities such as playgrounds, athletic fields, and hand launch boat ramps.

“Recreational development, passive” means activities that require a minimum of facilities such as swimming, picnicking, hiking, canoeing and fishing.

2. Policies

- a. Acquire/Purchase shoreline areas that may be appropriate for recreational use and incorporate these areas into the City’s public park and open space system.
- b. Encourage the linking shoreline parks and recreational areas.
- c. Encourage recreational development to take advantage of key views or vistas.
- d. Make provision for vehicular and pedestrian access within recreational developments.
- e. Require the buffering recreational areas from surrounding private property through the use of landscaping and other structures.
- f. Give priority to recreation developments that provide access and use of the water.
- g. Encourage trail systems, including pedestrian and bicycle facilities, to be located in proximity to shoreline areas. The interconnection of these trails to existing trails or bikeways is encouraged.

3. Regulations

- a. The location, design and operation of recreational facilities shall consistent with purpose of the shoreline designations in which the land is located.

- b. Sensitive or fragile areas shall not be used for recreational uses.
- c. Recreational facilities shall make adequate provisions for water supply, sewage disposal, and garbage collection.
- d. Recreational facilities shall make adequate provisions for vehicular parking.
- e. For recreational uses including golf courses or play fields, that might require the use of pesticides, fertilizers or chemicals, the applicant shall submit evidence of the methods used to prevent these chemical applications leaching to adjacent water bodies. Vegetative strips shall be required between shoreline areas and the recreational development where pesticides are utilized. The vegetative area shall not be less than 100 feet wide, when measured on a horizontal plane.
- f. Recreational development and ongoing management practices shall occur in a manner that achieves no net loss of ecological functions and values.
- g. Adequate provisions shall be made for screening, setbacks, fences and signs.
- h. Signs shall be kept to a minimum and shall be used for the purpose of providing information or directions.
- i. Commercial recreational developments shall also comply with all commercial policies and regulations of this Shoreline Master Program.

L. Residential Development

1. Definition

“Residential development” means construction or alteration of one or more buildings, structures, or portions thereof which are designed for and used to provide a place of abode for human beings. This includes single-family residences, duplexes, multi-family dwellings, apartments, condominiums, townhomes, mobile home parks, group housing, as well as normal appurtenances. Residential development also includes land divisions, including short plats, of residentially zoned land. It also includes all modifications to land and vegetation associated with construction,

preparation, or maintenance of residential structures and/or normal appurtenances. Residential development shall not include hotels or motels or other accommodation facilities.

2. Policies

- a. Identify single-family residences as a priority use of the shoreline only when developed in a manner consistent with control of pollution and prevention of damage to the natural environment.
- b. Prohibit residential development over the water.
- c. Require public access to the shoreline for subdivisions resulting in more than 5 residential dwellings.
- d. Require clustering of new residential development in order to protect natural features and cause the minimum disturbance.
- e. Require that residential development be sited such that flood hazard protection measures are not necessary to protect the structure.

3. Regulations

- a. Over water residential development is prohibited.
- b. Residential development is prohibited in the floodway.
- c. If any environmentally sensitive areas exist on the project site, residential development shall be clustered in order to prevent impacts to sensitive areas.
- d. Multiunit residential developments or planned unit developments of 5 or more lots is required to provide for public pedestrian access consistent with the provisions in 7.D Public Access. Public access amenities shall be in the form of pedestrian access, as well as a maintenance agreement for the area that is dedicated for public pedestrian access. The public access easement shall be a minimum of six feet in width.
- e. Subdivisions of land shall depict the applicable shoreline designation on the face of the plat.

- f. Non-water dependent normal appurtenances such as decks, sheds, and stairways shall meet applicable setbacks.
- g. Development shall assure that surface water runoff does not pollute adjacent waters or cause erosion both during or after construction.
- h. Developments shall be designed to include measures to prevent overflow usage of common areas upon adjacent privately owned shorelands and uplands.
- i. Amenities provided by residential developments shall not be detrimental to the natural processes occurring within the shoreline.
- j. Roads, utilities, and other improvements shall comply with the applicable policies and performance standards of this Master Program.
- k. Residential structures shall not be located in areas subject to flooding unless complete flood proofing measures have been provided, and then only when the location of such structures will not aggravate flooding possibilities of nearby properties.
- l. Alteration of topography for building sites, access roads, and utilities shall be conducted in compliance with the applicable policies and performance standards of this Master Program.
- m. Residential development shall be required to connect to City sewer systems, if available. On-site sewage disposal systems shall only be located within shorelines jurisdiction if City sewer is not available. All on-site sewage systems must comply with shoreline designation setbacks.
- n. Residential structures shall not exceed thirty feet in height.
- o. One footpath to the water is permitted for each residential lot. The footpath shall be no wider than 6 feet and shall be constructed of pervious materials.
- p. Residential development including the subdivision of lots shall be designed to achieve the following:
 - 1. Prevent the loss of ecological functions at full build-out.
 - 2. Be set back from sensitive shoreline habitat such that there is no net loss to shoreline function.

3. Prevent the need for new shoreline stabilization or flood hazard reduction measures.
4. Be consistent with applicable SMP designations and standards.

M. Restoration Activities

1. Definition

"Restore," "restoration" or "ecological restoration" means the reestablishment or upgrading of impaired ecological shoreline processes or functions. This may be accomplished through measures including, but not limited to, revegetation, removal of intrusive shoreline structures and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the shoreline area to aboriginal or pre-European settlement conditions.

2. Policies

- a. Facilitate the projects described within the Shoreline Restoration Plan (Appendix D).
- b. Prioritize restoration and enhancement of public open space and parks within the City.
- c. Create incentives to promote the integration of shoreline restoration into development projects.

3. Regulations

- a. Restoration and enhancement shall be carried out in accordance with an approved shoreline restoration plan (Appendix D).
- b. All shoreline restoration and enhancement projects shall protect the integrity of adjacent natural resources, including aquatic habitats and water quality.
- c. Long-term maintenance and monitoring shall be included in restoration or enhancement proposals.
- d. Shoreline restoration and enhancement may be allowed if the project proponent demonstrates that the project will improve ecological processes or habitat.

- e. Shoreline restoration and enhancement shall not impact adjacent properties.
- f. Shoreline restoration and enhancement projects shall be designed using scientific and technical information, and implemented using best management practices.
- g. Shoreline restoration and ecological enhancement projects may be permitted in all shoreline designations.

N. Signs

1. Definition

“Signs” means any commercial or noncommercial communication device, structure, or fixture that is intended to aid an establishment in promoting the sale of a product, good or service using graphics, symbols or written copy (including the name of a business). Directional and incidental signs are considered signs for the purpose of this Program.

2. Policies

- a. Prohibit signs that impact the ecological function of the shoreline.
- b. In order to maintain consistency throughout the City of Fife, signs and the permitting of signs within the jurisdiction should be consistent with Fife Municipal Code (FMC) Chapter 16 – Signs. In the event of a discrepancy between the regulations provided in this SMP and those provided in FMC, Chapter 16 the regulations more protective of shoreline function shall apply.
- c. Require signs to be appropriate to the context and character of their location within the shoreline area.
- d. Prohibit signs from interfering with views and/or access of the shoreline area.
- e. Prohibit moving and/or flashing signs within the shoreline jurisdiction.

3. Regulations

- a. Signs that impact shoreline ecological function shall not be permitted.
- b. Signs shall be located on the same property or within the same development as the business or organization being advertised.

Offsite advertising signs, including commercial billboards, are prohibited.

- c. Signs shall comply with the sign regulations in FMC Title 16, except where the requirements of this section are more stringent.
- d. Freestanding signs may be allowed within the shoreline buffer and setback for water-dependent and water-related development and uses that are also located in the buffer and/or setback area, including on-site directory and public information signs, and for public access and park interpretative and directional signage, subject to the following requirements:
 - 1. Signs are limited to 5 feet in height from the ground level and 20 square feet in area.
 - 2. Signs shall not obscure or block view and/or access of the shoreline area.
- e. New, expanded or replacement signs shall not be internally illuminated. Lighting shall be directed downward upon the sign face, not toward the water or neighboring properties, and shall also meet the standards of the city zoning code.
- f. New, expanded or replacement signs shall not be oriented to face Hylebos Creek or the Puyallup River and/or be located in the Aquatic designation, except for directional and interpretative signs for public access and public recreation amenities that can be accessed from the water, such as from hand launch boating facilities.
- g. Signs required by law shall not be subject to limitations with respect to the number, location, and/or size, provided that they are the minimum necessary to achieve the intended purpose. Such signs include, but are not limited to, official or legal notices issued and posted by any public agency or court, or traffic directional or warning signs.
- h. Temporary construction and real estate signs not exceeding the requirements identified in FMC Title 16, as amended, are permitted, but must be located outside of all required setbacks including the right of way.

O. Transportation Facilities and Parking

1. Definition

In the context of the Shoreline Master Program, “Transportation facilities” means those structures and developments that aid in land and water surface movement of people, goods, and services. Within the City of Fife, transportation facilities include roads and highways, bridges and causeways, railroad facilities, and other related facilities. Bikeways and trails are considered recreational uses.

Parking is the use of land for accommodating cars, trucks, trailers and motor vehicles.

2. Policies

- a. Require roads or railway facilities to be appropriately located to fit the characteristics of the shoreline area.
- b. Encourage the joint use of transportation corridors for roads, utilities and motorized forms of transportation within the shoreline jurisdiction.
- c. Circulation planning should include systems for pedestrian, bicycle and public transportation where appropriate. Circulation planning and projects should support existing and proposed shoreline uses that are consistent with this master program.
- d. Minimize parking in shoreline areas and should not be allowed to be the primary use of any shoreline parcel.
- e. Encourage the use of pervious parking surface materials.
- f. Require parking proposed within a shoreline area to be directly associated with a permitted use and should be designed in a manner that is sensitive to the surrounding shoreline area.
- g. Require parking areas to be placed in a manner which lessens the visual impact. Landscaping should be utilized for the purpose of screening.
- h. Require landscaping in shoreline areas to utilize native plant species.
- i. Prohibit parking areas from being located in shoreline setbacks, critical areas or associated buffers.

3. Regulations

- a. Proposed transportation and parking facilities shall be required to plan, locate and design routes that will result in no net loss of shoreline ecological function or adversely impact existing or planned water dependent uses.
- b. When feasible, major highways and railroads shall be located away from the shoreline.
- c. Transportation facilities should utilize existing transportation corridors where possible, provided that the shoreline area is not adversely impacted.
- d. Roads and railroads shall be located to provide buffer areas along streams and other shorelines.
- e. Road drainage design shall control the dispersal of surface runoff from roads and exposed soils in order to minimize runoff dispersing into waterways.
- f. All construction work shall minimize impacts to the shoreline area.
- g. Cut and fill slopes shall be protected from erosion by mulching, seeding and other appropriate strategies.
- h. Roads and waterway crossings shall not be wider than necessary to accommodate the anticipated use.
- i. Waterway crossings shall be designed to provide minimal disturbance to banks.
- j. Culverts and similar devices shall be designed to accommodate 100-year flood storm frequencies.
- k. Bridges and similar devices shall be designed to accommodate 100-year flood storm frequencies.
- l. No machinery shall operate waterward of the Ordinary high water mark except in compliance with a hydraulics permit issued by the Washington State Department of Fish and Wildlife, or current regulating agency as amended.
- m. All material associated with road construction that is potentially unstable or erodible shall be stabilized by compacting, seeding, mulching, or other suitable means.
- n. All roads and drainage systems shall be maintained to prevent

erosion and/or water quality degradation.

- o. Road routes shall make provisions for pedestrian, equestrian, bicycle, and other modes of travel whenever feasible.
- p. Parking, as a primary use is prohibited in the shoreline jurisdiction, but must be provided in association with a permitted use and shall be the minimum size necessary for that use.
- q. Parking in shoreline areas should be designed in concert with landscaping design to screen parking facilities from shorelines and abutting properties.
- r. Pervious paving materials are encouraged to minimize impervious surface runoff.
- s. Proposed landscape areas shall be permanently maintained in a tidy manner, free of rubbish and debris consistent with FMC 19.64.080.B .
- t. Parking shall not be permitted closer to the shoreline than a permitted structure and use.
- u. Security lighting associated with parking facilities shall be beamed, hooded, or directed so as to not cause glare on adjacent properties or water bodies.
- v. Transportation and parking facilities shall be constructed to be consistent with the City of Fife's stormwater manual.

P. Utilities

1. Definition

“Utilities” are services that produce, transmit, carry, store, process or dispose of electric power, petroleum, natural gas, water, sewage, communications, etc.

2. Policies

- a. Where possible, require utilities to utilize existing transportation and utility sites or right-of-ways.
- b. Where possible, require utilities to be placed underground.
- c. Prohibit solid waste disposal in the shoreline area.
- d. Require new utility facilities to be placed in such a manner as to result in the minimum impact to the shoreline area.

3. Regulations

- a. When applying for the installation of utility facilities, the following should be included:
 - 1. The need for the utility facility to be located in the shoreline;
 - 2. Descriptions of alternative location(s) and why they have not been selected; and
 - 3. A plan for the reclamation of the area disturbed during construction.
- b. Utilities shall be coordinated with local government agencies and among utility providers and provide for the multiple use of sites and right-of-way, where feasible, to minimize impacts to the shoreline.
- c. The design, location and maintenance of utilities shall result in no net loss of shoreline ecological function.
- d. Utility production and processing facilities and transmission facilities shall be located outside of the shoreline jurisdiction unless no other feasible option exists.
- e. The proposal for a new utility corridor or river crossing shall provide reasoning for the infeasibility of utilizing an existing route.
- f. New solid waste disposal sites or facilities are prohibited within the shoreline jurisdiction.

- g. New utility lines, including electricity, fuel lines or communication shall be installed underground whenever feasible.
- h. The following utility facilities may be permitted as a conditional use if evidence can be provided that no reasonable alternative exists:
 - 1. Sewage system line, interceptors, pump stations, treatment plants.
 - 2. Gas pipelines.
 - 3. Water system treatment plants.
 - 4. Electrical energy generating plants, substations, lines and cables.
- i. Utilities shall be designed and installed to meet future needs when possible.
- j. Where water lines must cross rivers, they shall be completely buried except where they may be affixed to a bridge structure.
- k. If construction of utilities underwater is required, it shall be timed to avoid impacts to fish and wildlife.

10. SHORELINE ADMINISTRATIVE PROCEDURES

A. Purpose

The purpose of this chapter is to provide provisions for the administration and enforcement of a permit system that shall implement the State Shoreline Management Act of 1971, Chapter 90.58 RCW; the State Department of Ecology regulations and guidelines adopted as Chapters 173-26 and 173-27 WAC; and the Fife shoreline master program, together with amendments and/or additions thereto.

Issuance of any shoreline permit or exemptions from the City does not obviate requirements for other federal, state and county permits, procedures and regulations.

B. Permit Processing - General

1. Applications for shoreline permits shall be processed in accordance with the applicable provisions of Title 14; provided that, where the provisions of Title 14 and the administration and permitting provisions of the shoreline master program conflict the provisions of the shoreline master program shall apply.
2. Applications for shoreline substantial development permits, shoreline conditional use permits and shoreline variances shall be processed as Type 3 permits as provided for in Title 14.
3. The Director shall have the responsibility for the administration of the permit system pursuant to the requirements of the Shoreline Management Act (RCW 90.58) and regulations adopted and promulgated by the State Department of Ecology as it pertains to the city including, but not limited to, determinations of whether a development requires a Substantial Development Permit, a Shoreline Conditional Use Permit, a Shoreline Variance and/or is exempt.
4. Applications for shoreline permits and/or statements of exemptions shall be made on forms provided by the Director. Applications shall be substantially consistent with the information required by WAC 173-27-180 including but not limited to the following:
 - a. Completed intake form from WAC 173-27-990, Appendix A – Shoreline Management Act Permit Data Sheet and Transmittal Letter.
 - b. The name, address and phone number of the applicant. The applicant should be the owner of the property or the primary proponent of the project and not the representative of the owner or primary proponent.
 - c. The name, address and phone number of the applicant's representative, if other than the applicant.

- d. The name, address and phone number of the property owner, if other than the applicant.
- e. Location of the Property. This shall, at a minimum, include the property address and identification of the section, township and range to the nearest quarter, quarter section or latitude and longitude to the nearest minute. All applications for projects located in open water areas away from land shall provide a longitude and latitude location.
- f. Identification of the name of the shoreline (water body) that the site of the proposal is associated with. This shall be the water body from which jurisdiction of the Act over the project is derived.
- g. A general description of the proposed project that includes the proposed use or uses and the activities necessary to accomplish the project.
- h. A general description of the property as it now exists including its physical characteristics and improvements and structures.
- i. A general description of the vicinity of the proposed project including identification of the adjacent uses, structures and improvements, intensity of development and physical characteristics.
- j. A site development plan consisting of maps and elevation drawings, drawn to an appropriate scale to depict clearly all required information, photographs and text which shall include:
 1. The boundary of the parcel(s) of land upon which the development is proposed.
 2. The ordinary high water mark of all water bodies located adjacent to or within the boundary of the project. This may be an approximate location; provided, that for any development where a determination of consistency with the applicable regulations requires a precise location of the ordinary high water mark the mark shall be located precisely and the biological and hydrological basis for the location as indicated on the plans shall be included in the development plan. Where the ordinary high water mark is neither adjacent to or within the boundary of the project, the plan shall indicate the distance and direction to the nearest ordinary high water mark of a shoreline.
 3. Existing and proposed land contours. The contours shall be at intervals sufficient to accurately determine the existing character of the property and the extent of proposed change to the land that is necessary for the development. Areas within the boundary that will not be altered by the development may be indicated as such and contours approximated for that area.
 4. A delineation of all wetland areas that will be altered or used as a part of the development.
 5. A general indication of the character of vegetation found on the site.
 6. The dimensions and locations of all existing and proposed structures and improvements including but not limited to: buildings, paved or graveled areas, roads, utilities, septic tanks and drainfields, material stockpiles or surcharge, and stormwater management facilities.
 7. Where applicable, a landscaping plan for the project.

8. Where applicable, plans for development of areas on or off the site as mitigation for impacts associated with the proposed project shall be included and contain information consistent with the requirements of this section.
 9. Quantity, source and composition of any fill material that is placed on the site, whether temporary or permanent.
 10. Quantity, composition and destination of any excavated or dredged material.
 11. A vicinity map showing the relationship of the property and proposed development or use to roads, utilities, existing developments and uses on adjacent properties.
 12. Where applicable, a depiction of the impacts to views from existing residential uses and public areas.
 13. On all variance applications the plans shall clearly indicate where development could occur without approval of a variance, the physical features and circumstances on the property that provide a basis for the request, and the location of adjacent structures and uses.
- k. The Director shall determine if the application is complete based upon the information required by this chapter.

C. Application – Notices

1. The Director shall give notice of the application in accordance with the applicable provisions of Title 14.03 and 14.06, no less than 30 days prior to permit issuance.
2. When a public hearing is required, the notices shall include a statement that any person desiring to present his/her views may do so orally or in writing at the public hearing, or may submit written comments prior to the public hearing which will be provided to the hearing examiner at the public hearing. The public notice shall also state that any person interested in the hearing examiner's action on an application for a permit may notify the Director of his/her interest in writing within 30 days of the last date of publication of the notice. Such notification to the Director or the submission of views to the hearing examiner shall entitle said persons to a copy of the action taken on the application.

D. Application – Shoreline substantial development permit – Review criteria

1. A substantial development permit shall be granted by the Hearing Examiner only when the development proposed is consistent with the following:
 - a. Goals, objectives, policies and use regulations of the City of Fife SMP;
 - b. Fife Comprehensive Plan and Municipal Code; and
 - c. The policies and regulations of the SMA as well as the associated guidelines (Chapter 90.58 RCW; Chapters 173-26 and 173-27 WAC).
2. The Hearing Examiner may attach conditions to the approval of permits as necessary to assure consistency of the proposal with the above criteria.

E. Application – Shoreline conditional use permit – Review criteria

1. Pursuant to WAC 173-27-210 and WAC 173-27-160, the criteria below shall constitute the minimum criteria for review and approval of a shoreline conditional use permit. Uses classified as conditional uses, and not uses prohibited by the regulations of this SMP, may be authorized; provided, that the applicant can demonstrate all of the following:
 - a. That the proposed use will be consistent with the policies of RCW 90.58.020, the policies of this SMP, the City of Fife Comprehensive Plan and other applicable plans, programs and/or regulations;
 - b. That the proposed use will not interfere with the normal public use or access to public shorelines;
 - c. That the proposed use of the site and design of the project will be compatible with other permitted uses within the area and with uses planned for the area under the comprehensive plan and shoreline master program;
 - d. That the proposed use will cause no unreasonably adverse effects to the shoreline, will not result in a net loss of ecological functions, and will not be incompatible with the environment designation or zoning classification in which it is to be located;
 - e. That the public interest suffers no substantial detrimental effect;
 - f. That the proposed use is in the best interest of the public health, safety, morals or welfare; and
 - g. That consideration of cumulative impacts resultant from the proposed use has occurred and has demonstrated that no substantial cumulative impacts are anticipated, consistent with WAC 173-27-160(2).
2. Other uses which are not classified or set forth in the master program may be authorized as conditional uses provided the applicant can demonstrate consistency with the requirements of this section.
3. The Hearing Examiner may attach conditions to the approval of permits as necessary to assure consistency of the proposal with the above criteria.
4. The decision of the hearing examiner shall be the final decision of the city. The Department of Ecology shall be the final authority authorizing a shoreline conditional use permit consistent with WAC 173-27-200.

F. Application – Shoreline variance – Review criteria

1. The purpose of a variance permit is strictly limited to granting relief from specific bulk, dimensional or performance standards set forth in this SMP, and where there are extraordinary or unique circumstances relating to the physical character or configuration of property such that the strict implementation of the SMP would impose unnecessary hardships on the applicant or thwart the SMA policies as stated in RCW 90.58.020. 2. Pursuant to WAC 173-27-210 and WAC 173-27-170, the criteria below shall constitute the minimum criteria for review and approval of a shoreline variance permit. Variance permits for development that will be located landward of the ordinary high water mark (per RCW 90.58.030(2)(b) definition), and/or landward of any

wetland as defined in RCW 90.58.030(2)(h) may be authorized, provided the applicant can demonstrate all of the following:

- a. That the strict requirements of the bulk, dimensional or performance standards set forth in the master program preclude or significantly interfere with a reasonable use of the property not otherwise prohibited by this SMP;
 - b. That the hardship described above is specifically related to the property, and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of the master program, and not, for example, from deed restrictions or the applicant's own actions;
 - c. That the design of the project will be compatible with other permitted activities within the area and with uses planned for the area under the comprehensive plan and shoreline master program and will not cause adverse impacts to the shoreline environment;
 - d. That the variance authorized does not constitute a grant of special privilege not enjoyed by other properties in the area, and will be the minimum necessary to afford relief; and
 - e. That the public interest will suffer no substantial detrimental effect;
3. Variance permits for development that will be located either waterward of the ordinary high water mark or any wetland as defined in RCW90.58.030(2)(h) may be authorized, provided the applicant can demonstrate all the criteria stated above as well as the following:
 - a. That the strict application of the bulk, dimensional or performance standards set forth in this SMP precludes all reasonable use of the property not otherwise prohibited by this SMP; and
 - b. That the public rights of navigation and use of the shorelines will not be adversely affected by the granting of the variance.
 4. In the granting of all variance permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if variances were granted to other developments in the area where similar circumstances exist, the total of the variances shall also remain consistent with the policies of RCW90.58.020 and shall not cause substantial adverse effects to the shoreline environment or result in a net loss of ecological functions.
 5. Variances from the use regulations of the master program are prohibited.
 6. The decision of the hearing examiner shall be the final decision of the city. The Department of Ecology shall be the final authority authorizing a shoreline variance consistent with WAC 173-27-200.

G. Statement of exemption

1. A Statement of Exemption shall be required for a development that is exempt from the requirements for a Shoreline Substantial Development Permit.
2. The Director shall, for exempt development proposals in shoreline jurisdiction subject to review, approval, and permitting by a federal or state agency, prepare a statement of exemption. The Statement of Exemption shall be addressed to the applicant, the federal or state permitting agency, and the

Department of Ecology. The Statement of Exemption shall indicate the specific exemption provision from WAC 173-27-040 that is being applied to the development and provide a summary of the analysis demonstrating consistency of the project with the Fife SMP and the SMA.

3. Exempt proposals shall be consistent with the goals and policies of the shoreline master program.
 - a. Exemptions shall be construed narrowly. Only those development that meet the precise terms of one or more of the listed exemptions may be granted exemptions from the substantial development permit process.
 - b. Exempt proposals shall be consistent with the goals, policies and provisions of the shoreline master program and the Act. An exemption from the substantial development permit process is not an exemption from compliance with the act or the local master program, nor from any other regulatory requirements. A development or use that is listed as a conditional use pursuant to the local master program or is an unlisted use, must obtain a conditional use permit even though the development or use does not require a substantial development permit. When a development or use is proposed that does not comply with the bulk, dimensional and performance standards of the master program, such development or use can only be authorized by approval of a variance.
 - (c) The burden of proof that a development or use is exempt from the permit process is on the applicant.
 - (d) If any part of a proposed development is not eligible for exemption, then a substantial development permit is required for the entire proposed development project.
4. The Director may attach conditions to exemptions as necessary to assure consistency of the proposal with the Act and the shoreline master program.

H. Development Conformance Burden of Proof

The burden of proving that the proposed development is consistent with the criteria set forth in this chapter, the master plan for the City, as well as the requirements of the Shoreline Management Act shall be on the applicant.

I. Application, Public Hearing, and decision at Open Record Public Hearing

1. The hearing examiner shall hold at least one public hearing on each application for a shoreline substantial development permit, shoreline conditional use permit, or shoreline variance on shorelines within the city. The public hearing shall be held not less than 30 days following the final publication of the notice.
2. If, for any reason, testimony on any matter set for public hearing, or being heard, cannot be completed on the date set for such hearing, the hearing

examiner may, before adjournment or recess of such matters under consideration, publicly announce the time and place of the continued hearing and no further notice is required.

3. When the hearing examiner renders a decision, the hearing examiner shall make and enter written findings from the record and conclusions thereof which support the decision. The findings and conclusions shall set forth the manner in which the decision is consistent with the criteria set forth in the Shoreline Management Act and departmental regulations.
4. The Director shall notify the following persons in writing of the hearing examiner's final approval, disapproval or conditional approval of a substantial development permit, shoreline conditional use permit, or shoreline variance application within eight (8) days of the Hearing Examiner's final decision:
 - a. The applicant;
 - b. The State Department of Ecology;
 - c. The State Attorney General;
 - d. Any person who has provided written or oral comments on the application at the public hearing;
 - e. Any person who has written the Director requesting notification.

J. Development commencement time

Development pursuant to a substantial development permit shall not begin and shall not be authorized until 21 days from the date the Director files the approved substantial development permit with the State Department of Ecology and Attorney General, or until all review proceedings initiated within 21 days of the date of such filing have been terminated.

K. Decision appeals

Any person aggrieved by the granting, denying or rescission of a substantial development permit by the hearing examiner may seek review from the State Shorelines Hearings Board by filing a petition for review with the board within 21 days of the date of filing, as defined by RCW 90.58.140(6), of the hearing examiner's final decision. Within seven days of the filing of the petition for review with the board, the person seeking review shall serve a copy of his petition with the State Department of Ecology, the office of the Attorney General and the Director.

L. Time Requirements and Revisions

1. Time Requirements for Shoreline Permits
 - a. The time requirements of this section shall apply to all substantial development permits and to any development authorized pursuant to a variance or conditional use permit authorized by this SMP.
 - b. Construction activities shall be commenced or, where no construction activities are involved, the use or activity shall be commenced within two years of the effective date of a substantial development permit. However, local government may authorize a single extension for a period not to exceed one year based on reasonable factors, if a request for extension has

been filed before the expiration date and notice of the proposed extension is given to parties of record on the substantial development permit and to the department.

- c. Authorization to conduct development activities shall terminate five years after the effective date of a substantial development permit. However, local government may authorize a single extension for a period not to exceed one year based on reasonable factors, if a request for extension has been filed before the expiration date and notice of the proposed extension is given to parties of record and to the department.
 - d. The effective date of a substantial development permit shall be the date of filing as provided in RCW 90.58.140(6). The permit time periods in subsections (b) and (c) of this section do not include the time during which a use or activity was not actually pursued due to the pendency of administrative appeals or legal actions or due to the need to obtain any other government permits and approvals for the development that authorize the development to proceed, including all reasonably related administrative or legal actions on any such permits or approvals.
 - e. Revisions to permits, pursuant to the provisions of WAC 173-27-100 and subsection 2, may be authorized after original permit authorization has expired; provided, that this procedure shall not be used to extend the original permit time requirements or to authorize substantial development after the time limits of the original permit.
 - f. The Director shall notify the Department of Ecology in writing of any change to the effective date of a permit, as authorized by this section, with an explanation of the basis for approval of the change. Any change to the time limits of a permit, other than those authorized by RCW 90.58.143 and this chapter, as amended shall require a new permit application.
2. Revision of Permits
- a. When an applicant desires to revise a Permit, the applicant must submit detailed plans and text describing the proposed changes. If the Director determines that the revisions proposed are within the scope and intent of the original Permit, consistent with RCW 90.58, the Director may approve the revision. "Within the scope and intent of the original Permit" means all of the following:
 1. No additional over-water construction is involved,
 2. Ground area coverage and height is not increased more than ten percent (10%);
 3. Additional structures do not exceed a total of two hundred fifty (250) square feet or ten percent (10%), whichever is less;
 4. The revision does not authorize development to exceed height, setback, lot coverage, or any other requirement of the City of Fife Shoreline Master Program;
 5. Additional landscaping is consistent with conditions (if any) attached to the original Permit;
 6. The use authorized pursuant to the original Permit is not changed; and

7. No substantial adverse environmental impact will be caused by the project revision.
- b. If the sum of the proposed revision and any previously approved revisions do not meet the criteria above, an application for a new Shoreline Permit must be submitted. If the revision involves a Conditional Use or Variance which was conditioned by the Department of Ecology, the revision also must be reviewed and approved by the Department of Ecology (see RCW 90.58). The City of Fife or the Department of Ecology decision on revision to the Permit may be appealed within twenty-one (21) days of such decision, in accordance with RCW 90.58.
- c. Construction allowed by the revised Permit that is not authorized under the original Permit is undertaken at the applicant's own risk until the expiration of the appeals deadline.

M. Non-conforming Development, Development & Building Permits, and Unclassified Uses

1. Non-conforming Development. Nonconforming development is a shoreline use or structure which was lawfully constructed or established prior to the effective date of the Act or the Master Program, or amendments thereto, but which does not conform to present regulations or standards of the Master Program or policies of the act. In such cases, the following standards shall apply:
 - a. Nonconforming uses and structures may continue provided that it is not enlarged or expanded;
 - b. A nonconforming use or structure which is moved any distance must be brought into conformance with the Shoreline Master Program and the Act;
 - c. If a nonconforming structure is damaged to an extent not exceeding fifty percent (50%) replacement cost of the nonconforming structure, it may be reconstructed to those configurations existing immediately prior to the time the structure was damaged, so long as restoration is completed within one year of the date of damage. Single-family nonconforming development may be replaced if damaged to one hundred percent (100%), if the restoration is completed within three years of the date of damage;
 - d. If a nonconforming use is discontinued for twelve (12) consecutive months or for twelve (12) months during any two-year period, any subsequent use shall be conforming; it shall not be necessary to show that the owner of the property intends to abandon such nonconforming use in order for the nonconforming rights to expire;
 - e. A nonconforming use shall not be changed to another nonconforming use, regardless of the conforming or nonconforming status of the building or structure in which it is housed; and
 - f. An undeveloped lot, tract, parcel, site, or division which was established prior to the effective date of the Act and the Master Program, but which does not conform to the present lot size or density standards may be developed so long as such development conforms to all other requirements of the Master Program and the Act.

- g. A use which is listed as a conditional use but which existed prior to adoption of the Master Program for which a Conditional Use Permit has not been obtained shall be considered a nonconforming use. h. A structure for which a Variance has been issued shall be considered a legal nonconforming structure and the requirements of this section shall apply as they apply to preexisting nonconformities.
2. Development and Building Permits. No building permit or other development permit shall be issued for any parcel of land developed or divided in violation of this Master Program. All purchasers or transferees of property shall comply with provisions of the Act and this Master Program and each purchaser or transferee may recover damages from any person, firm, corporation, or agent selling, transferring, or leasing land in violation of the Act or this Master Program including any amount reasonable spent as a result of inability to obtain any development permit and spent to conform to the requirements of the Act or this Master Program as well as cost of investigation, suit, and reasonable attorney's fees occasioned thereby. Such purchaser, transferee, or lessor may, as an alternative to conforming their property to these requirements, may rescind the sale, transfer, or lease and recover cost of investigation, and reasonable attorney's fees occasioned thereby from the violator.

N. Enforcement and Penalties

1. Enforcement
 - a. The provisions of Chapter 19.96 FMC relating to Enforcement shall apply to this chapter.
 - b. All provisions of the Master Program shall be enforced by the Director and/or a designated representative. For such purposes, the Director or a duly authorized representative shall have the power of a police officer.
 - c. The choice of enforcement action and the severity of any penalty should be based on the nature of the violation and the damage or risk to the public or to public resources. The existence or degree of bad faith of the persons subject to the enforcement action, the benefits that accrue to the violator, and the cost of obtaining compliance may also be considered.
2. Penalty: Any person found to have willfully engaged in activities on the city's shorelines in violation of the Shoreline Management Act (RCW) or in violation of the city's Master Program, rules or regulations adopted pursuant thereto shall be subject to the penalty provisions of FMC 19.96.030(B)(4) Civil citation penalties and FMC 19.96.030(B)(5) Criminal penalties.
3. Public and Private Redress: Any person subject to the regulatory program of the Master Program who violates any provision of the Master Program or the provisions of a Permit issued pursuant thereto shall be liable for all damages to public or private property arising from such violation, including the cost of restoring the affected area to its condition prior to such violation. The city attorney may bring suit for damages under this section on behalf of the city. Private persons shall have the right to bring suit for damages under this section on their own behalf and on behalf of all persons similarly situated. If

liability has been established for the cost of restoring an area affected by violation, the court shall make provisions to assure that restoration will be accomplished within a reasonable time at the expense of the violator. In addition to such relief, including monetary damages, the court, in its discretion, may award attorneys' fees and costs of the suit to the prevailing party.

4. Delinquent Permit Penalty: A person applying a Permit after commencement of the use or activity may, at the discretion of the City be required, in addition, to pay a delinquent permit penalty.

O. Master Program – Review, Amendments and Adoption

1. Tracking: The Director shall track and periodically evaluate the cumulative effects of all project review actions in shoreline areas. This may be scheduled to coincide with the Master Program review.
2. Amendments to Master Program. Any of the provisions of this Master Program may be amended as provided for in RCW 90.58.120 and .200 and WAC 173-26. Amendments or revision to the Master Program or Official Shoreline Designation Map, as provided by law, do not become effective until approved by the Washington State Department of Ecology. The full use of existing urban areas within the Urban and Levee designations shall be demonstrated before additional lands may be re-designated Urban or Levee.
3. Severability: If any provisions of this Master Program, or its application to any person or legal entity or parcel of land or circumstance, is held invalid, the remainder of the Master Program, or the application of the provisions to other persons or legal entities or parcels of land or circumstances, shall not be affected.
4. Effective Date: The effective date is fourteen days from the date of the Washington State Department of Ecology's [Ecology] written notice of final action to the local government stating the department has approved or rejected the proposal.
