

Project Description

This project invests in the preservation of Fife's street system. The limits extend from the Port of Tacoma Road to Milwaukee Ave E. The project will mill the pavement along the existing curbs followed by pre-level and wearing course paving of the entire roadway. It is anticipated that 10% of the project will require a combination of full depth restoration and additional milling to correct subgrade and cross slope geometry issues. The curb ramps within the project limits will be assessed for compliance with the ADA (Americans with Disabilities Act) and reconstructed as needed. Utility adjustments will be required and the sewer and storm frame and grates will be assessed for wear and replaced as necessary.

Project Justification

This principal arterial runs through an area of heavy commercial development. This project will overlay the whole roadway providing one uniform surface, correct areas of poor subgrade and strengthen the roadway section to handle the anticipated heavy traffic and freight movement with the closure of the Interstate 5 northbound bridge replacement.
